Antigone Creative Agency

Antigone

Host organization for the GoFit graduation internship

26 January–26 July 2026
Information Technology

Mobile application, backend integrations and web administration

Training, nutrition and coaching in one account

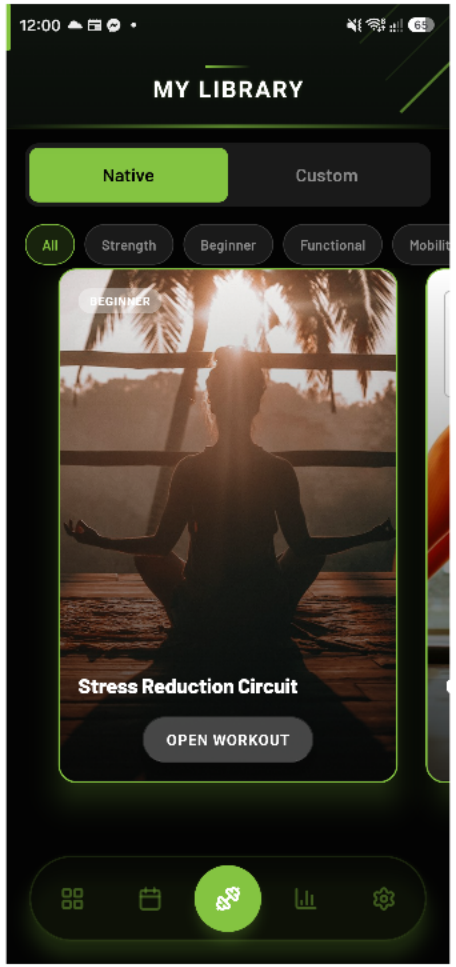

GoFit connects athletes, coaches and administrators across a mobile application and a web portal.

Graduation internship · ESPRIT · 2025–2026

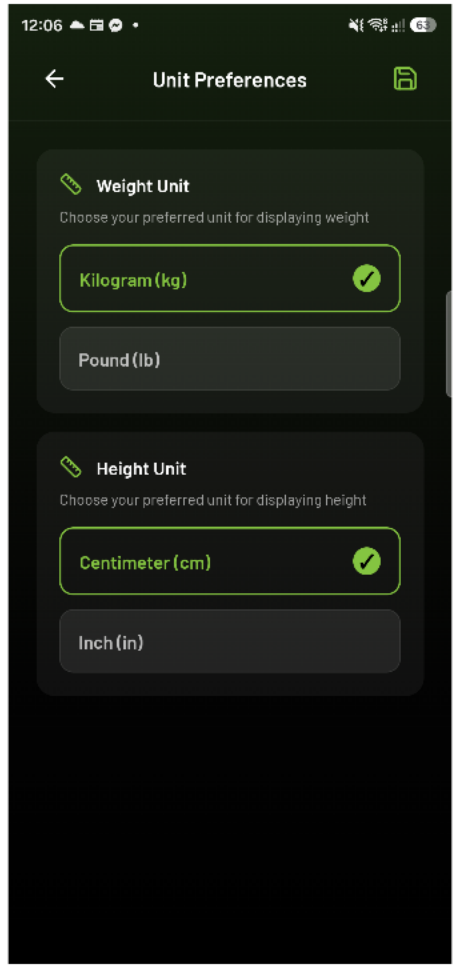

Athlete experience

Coaches
Catalogs
Transactions

Dashboard values belong to the QA environment.

Problem statement

Workout, nutrition and coaching information can be split across separate tools.

Repeated entry makes it harder to follow an athlete's history.

Coaches and administrators need role-specific access to shared records.

Design problem derived from the project scope; no formal user survey is claimed.

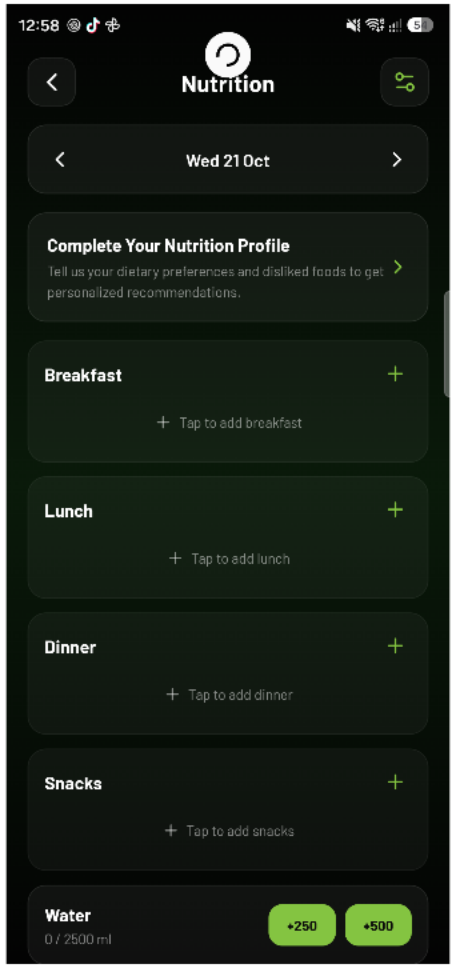

Project objective

How can one platform connect independent training with professional coaching?

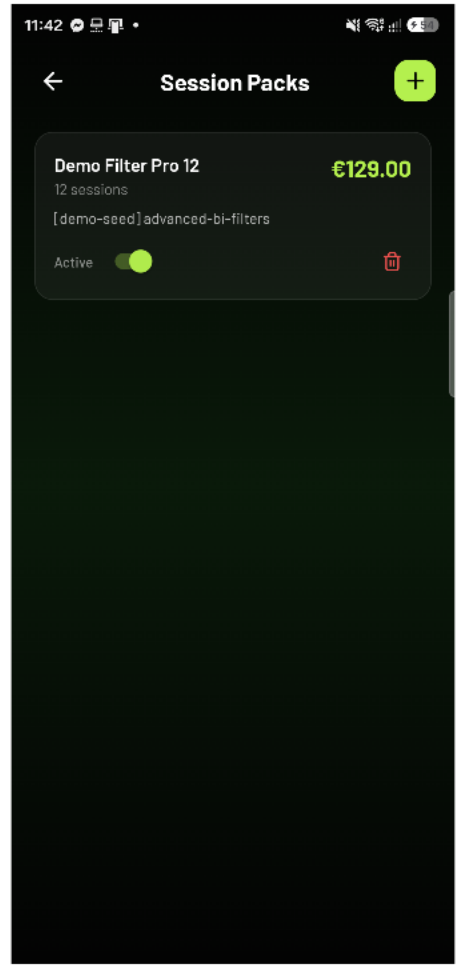

Separate workflows to connect

Workout sessions

Nutrition records

Coaching offers

Illustrated with GoFit screens; these are not competitor screenshots.

Limits of fragmented workflows

Repeated entry

The same information may need to be entered in several places.

History

Disconnected records make longitudinal follow-up harder.

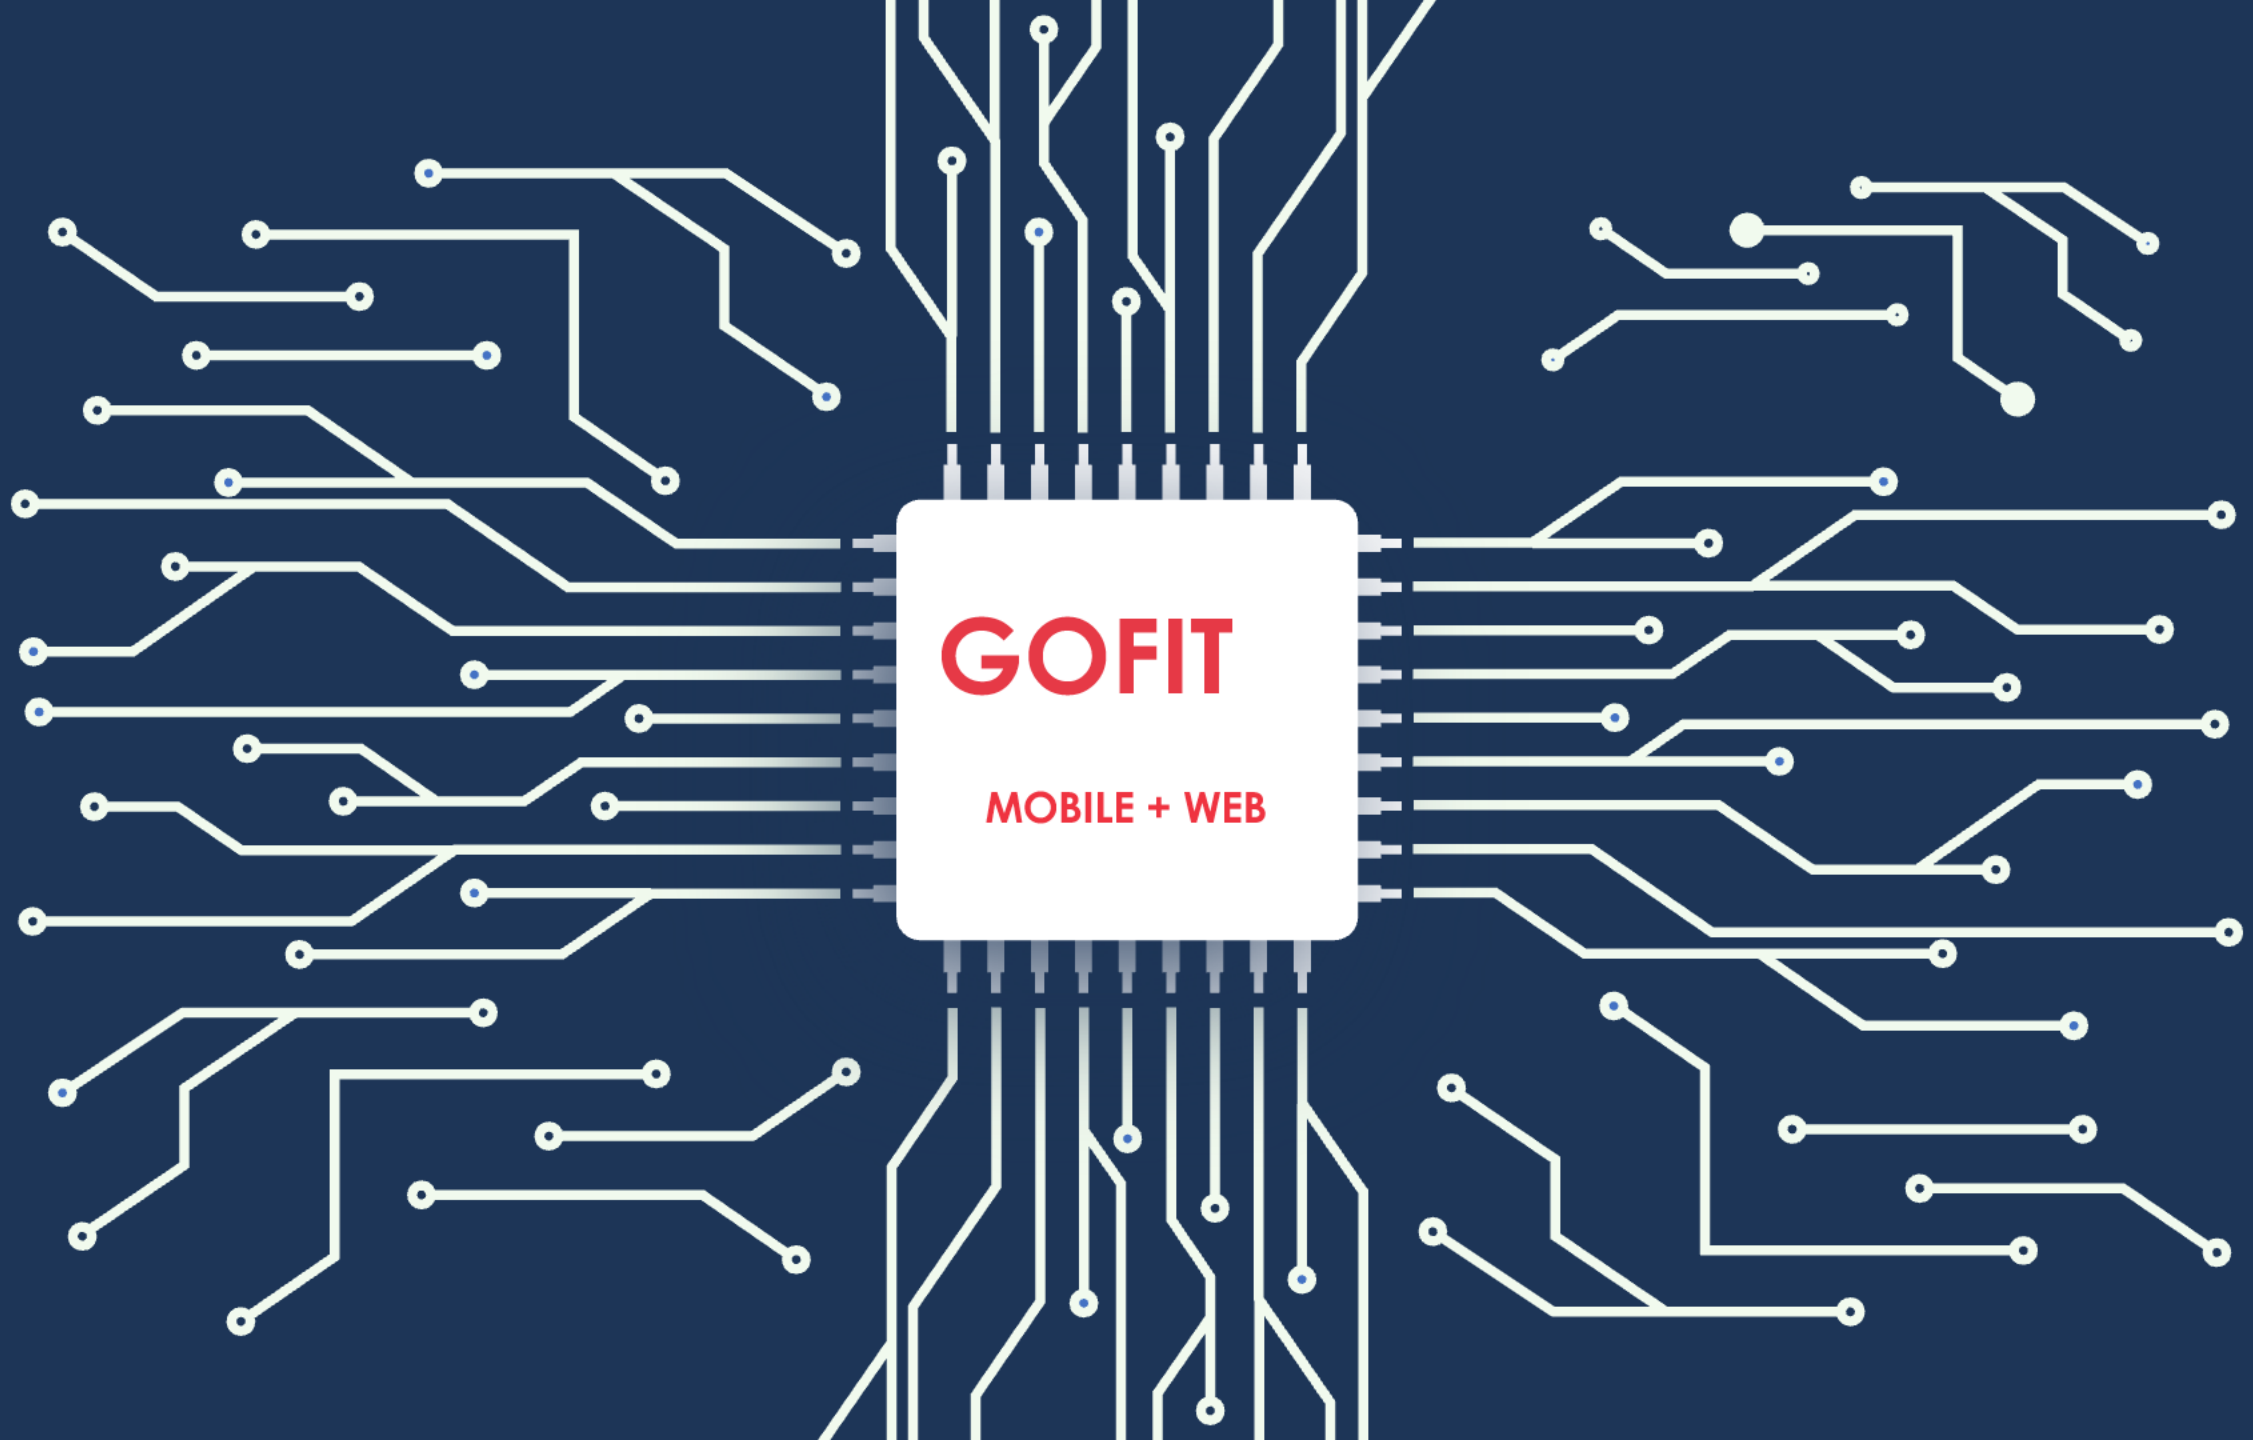

Continuity

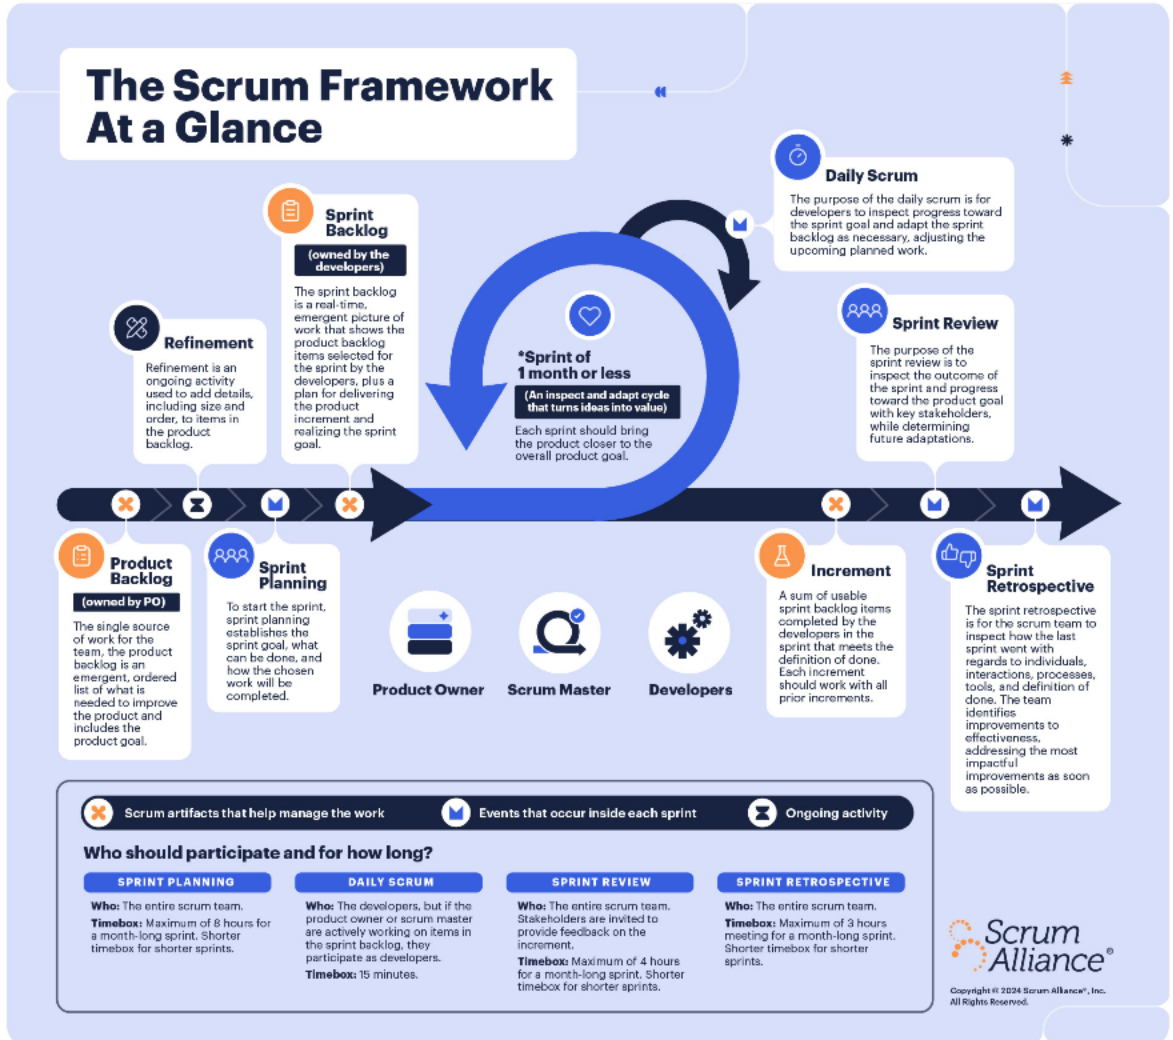

Separate tools interrupt the athlete–coach workflow.

Access

Shared information requires explicit access boundaries.

Development methodology

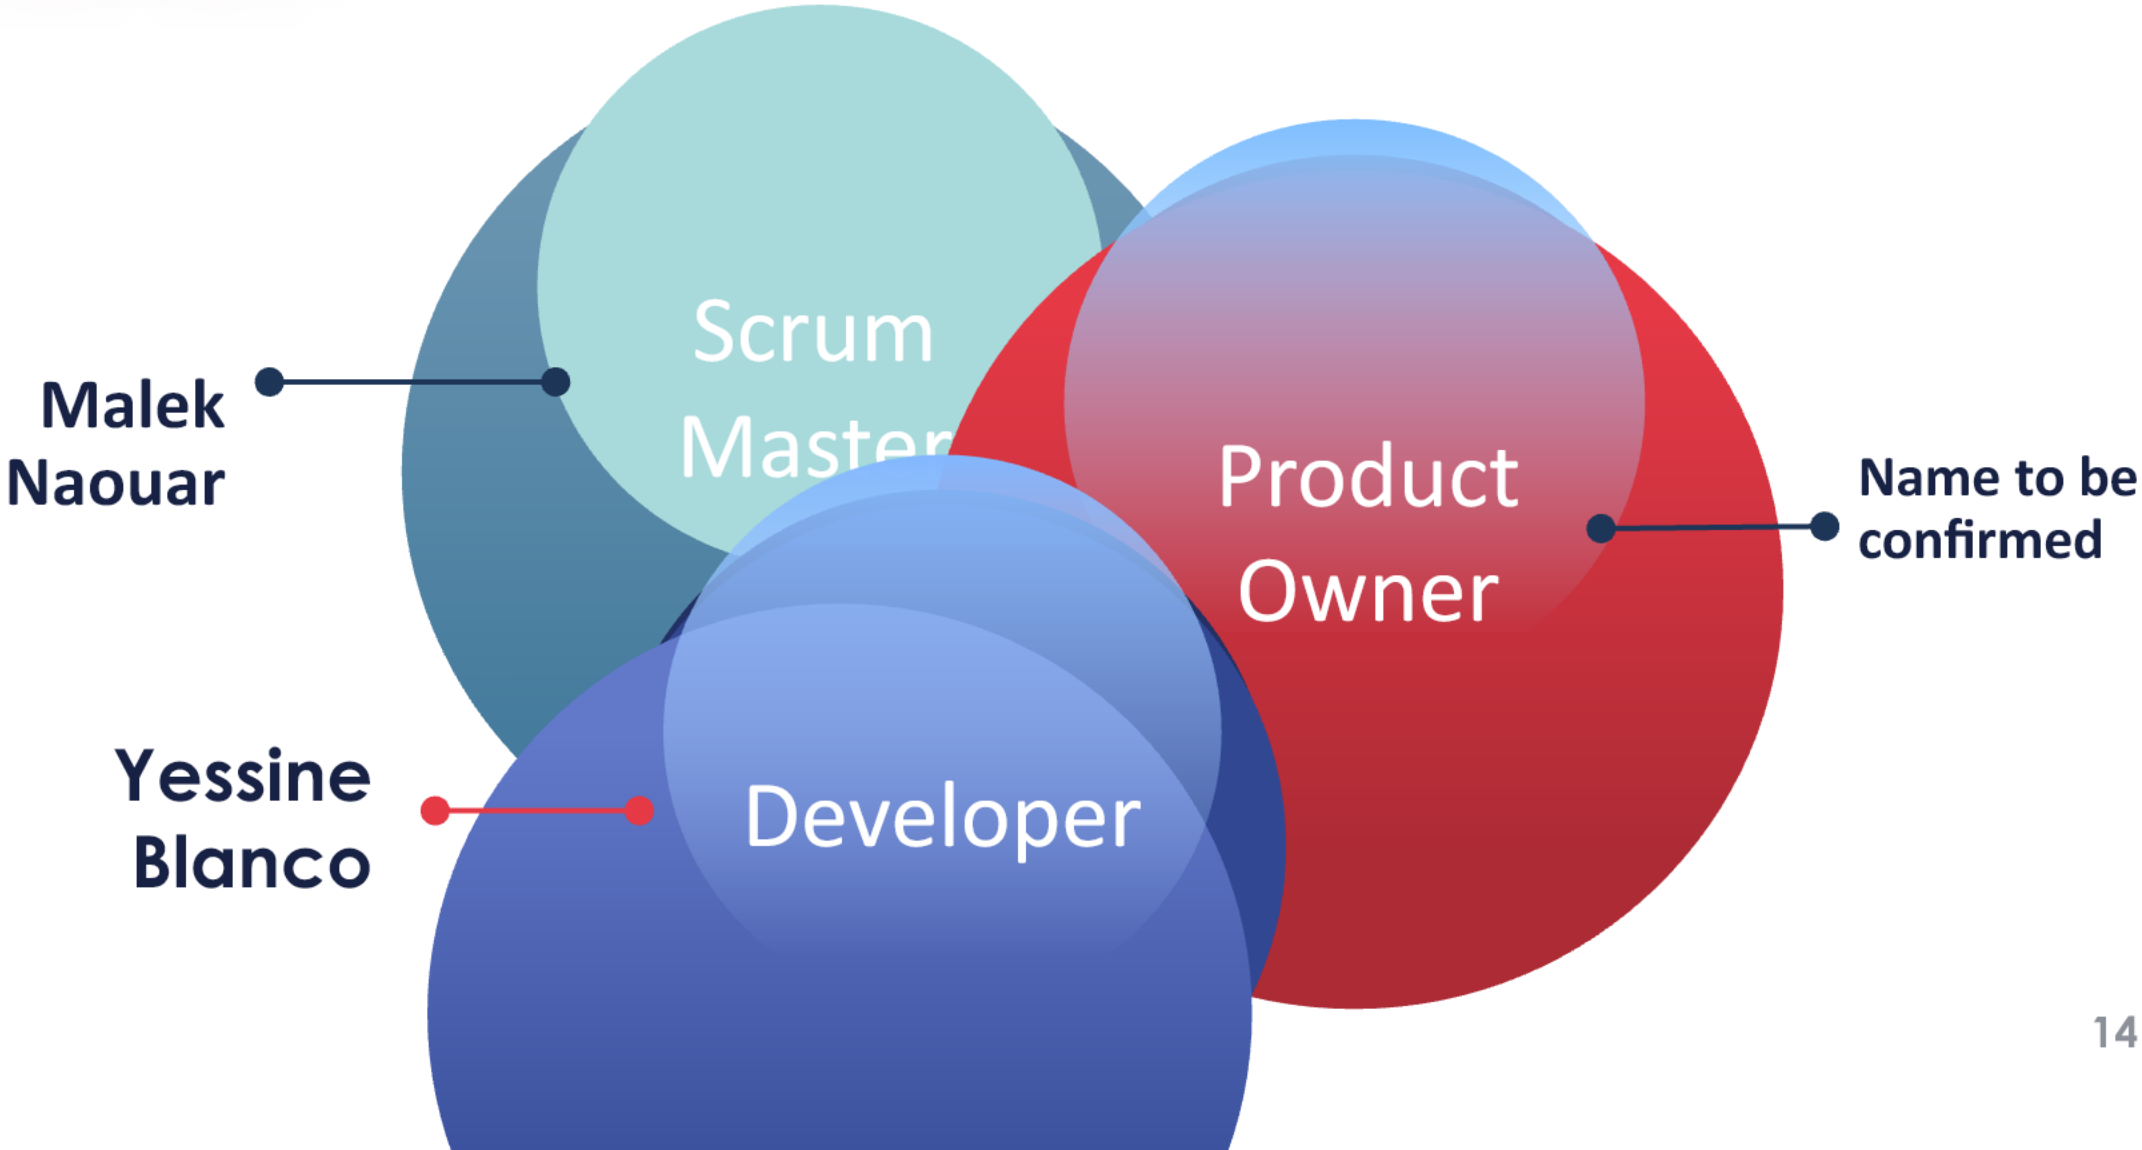

Scrum as the methodological reference

Incremental requirements, implementation, review and testing

Report chapters group scope; exact sprint-to-chapter dates remain unverified.

GoFit Scrum team

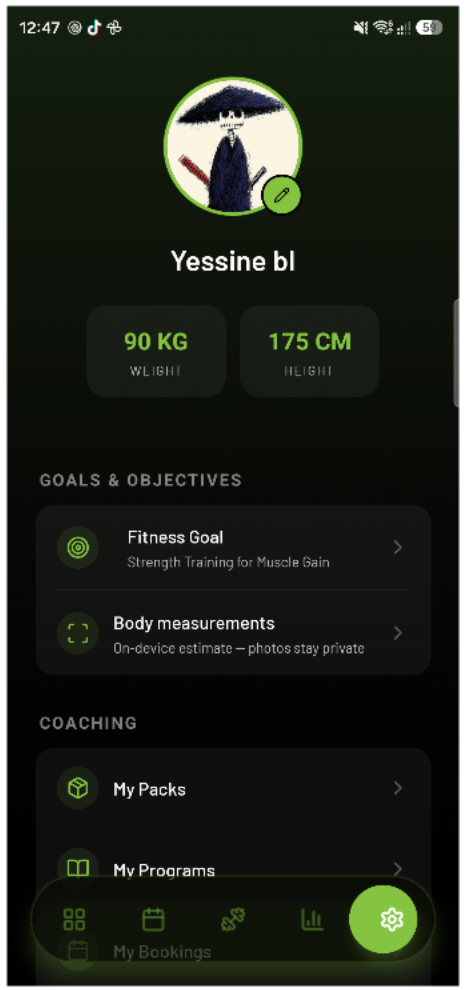

Functional requirements — athlete

Create a profile and personalize preferences

Build and execute workouts

Record nutrition and review progress

Discover coaches and access coaching offers

Functional requirements — coach and administrator

Coach

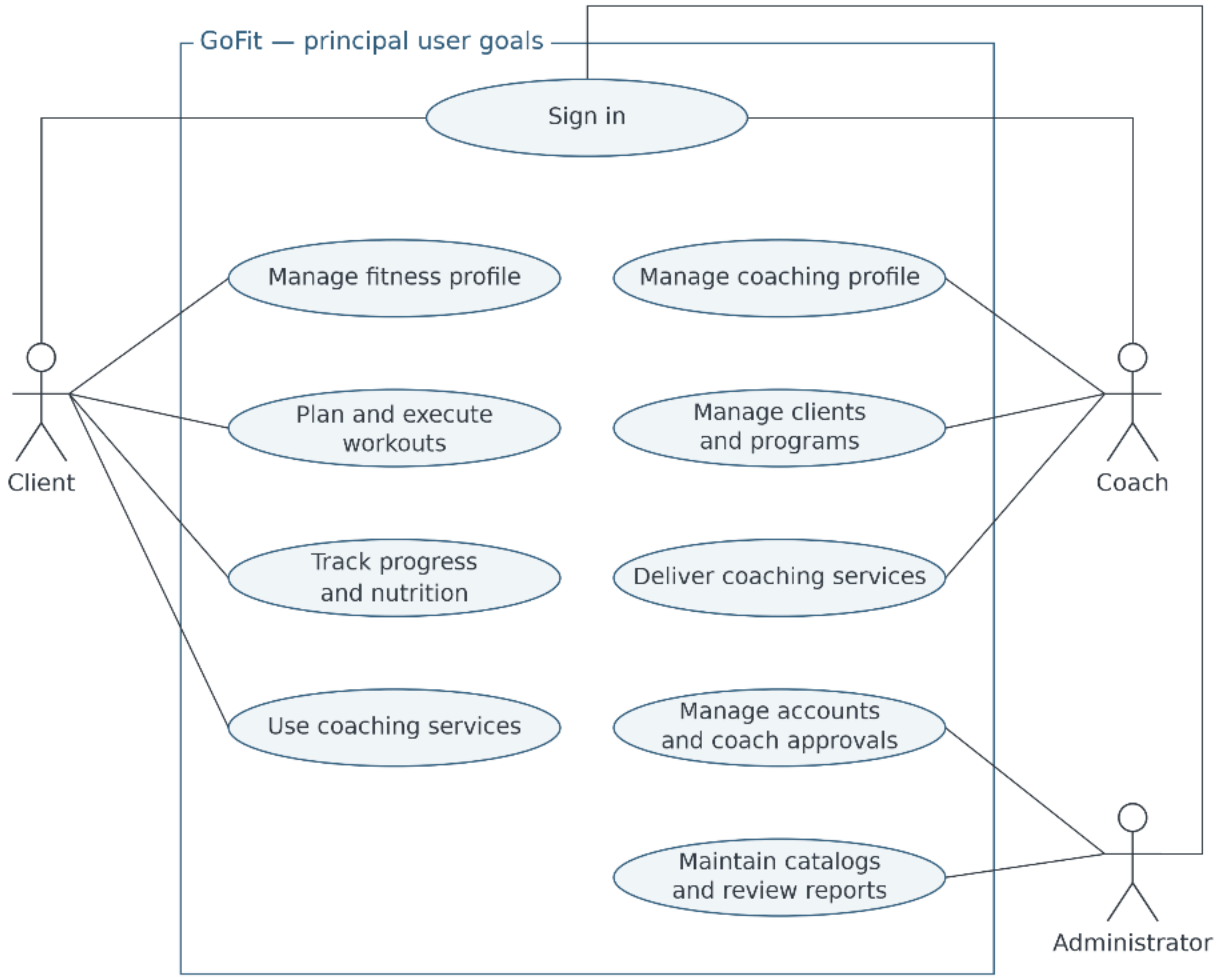

Programs and client follow-up
Availability and sessions
Packs, notes and communication

Administrator

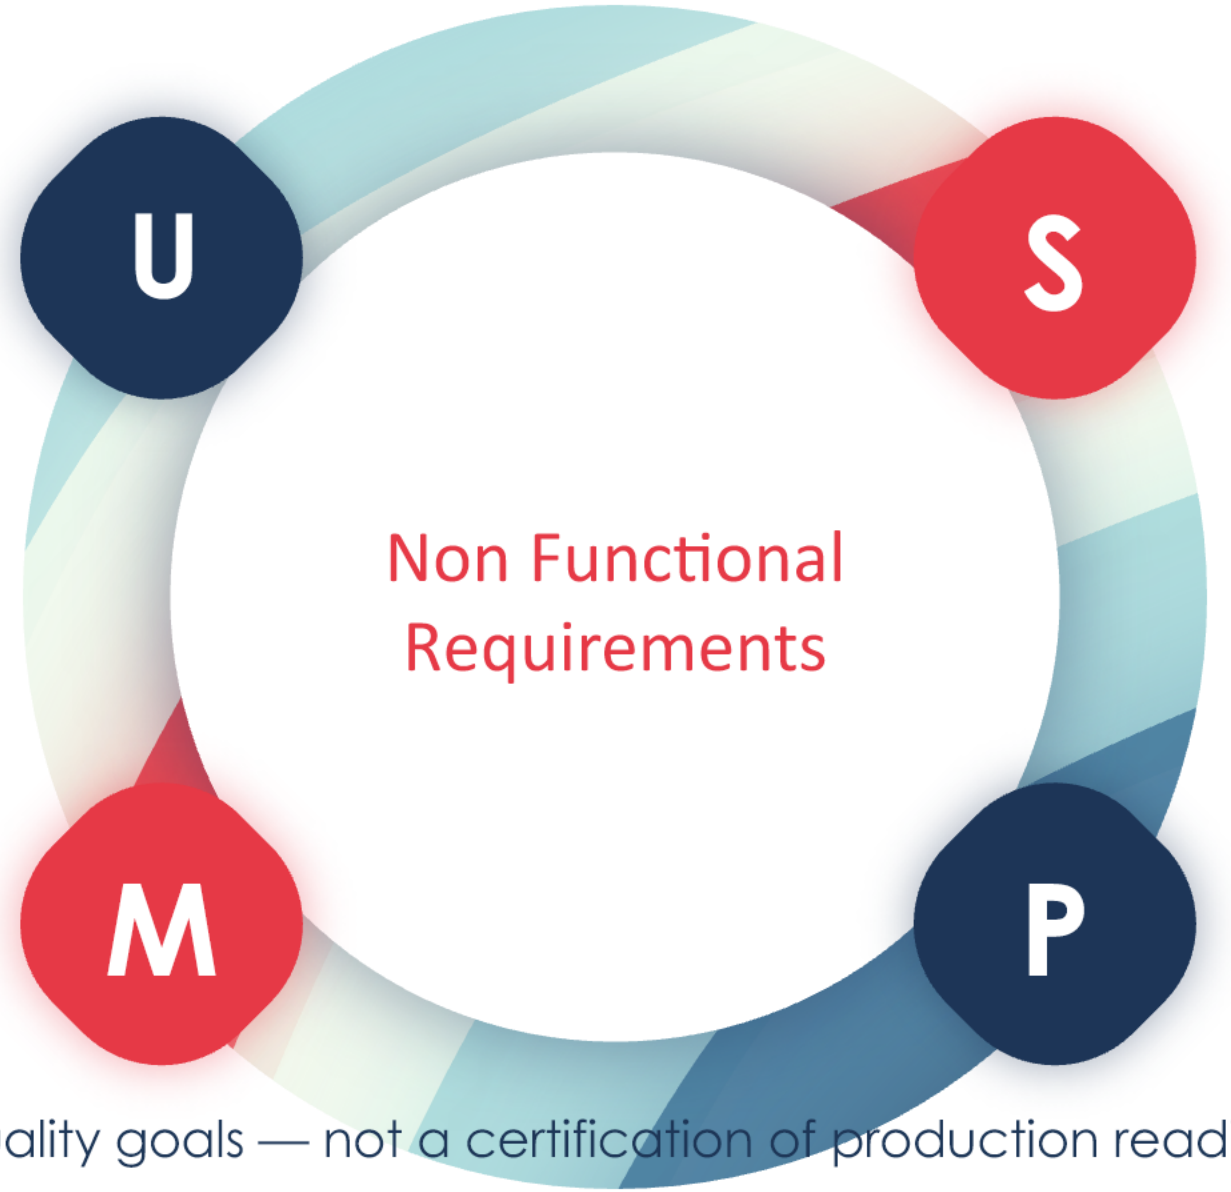

User and coach management
Exercise and workout catalogs
Transaction inspection and audit

Requirements describe intended scope; validation status is presented separately.

Global use case diagram

Non Functional Requirements

Usability

Security

Maintainability

Performance

Quality goals — not a certification of production readiness

Technologies and tools

Mobile

React Native · Expo · TypeScript

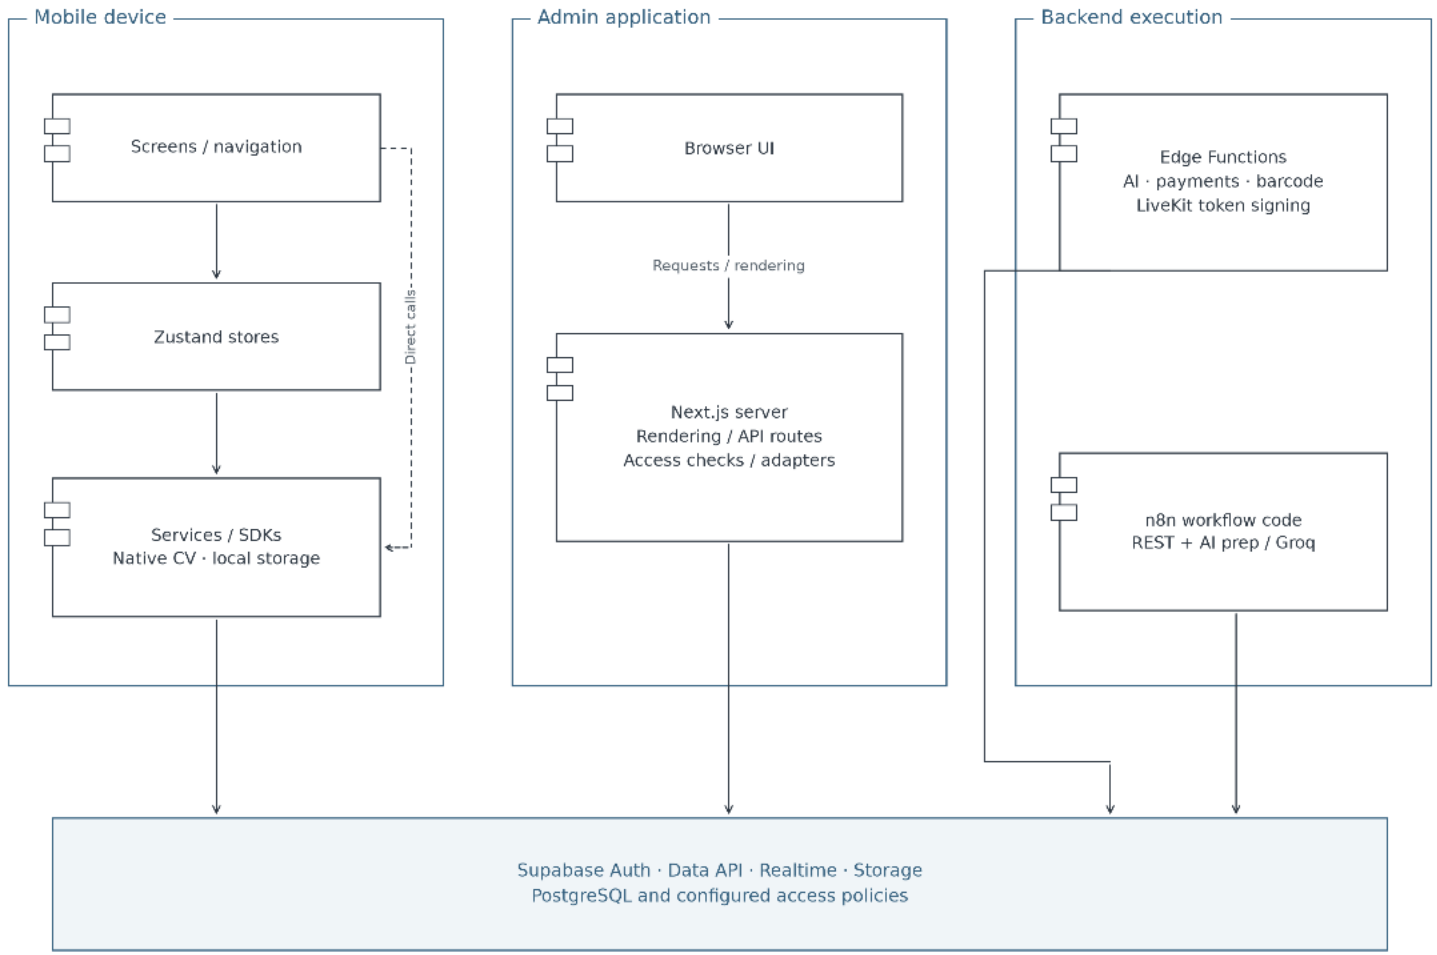

Administration

Next.js · React · TypeScript

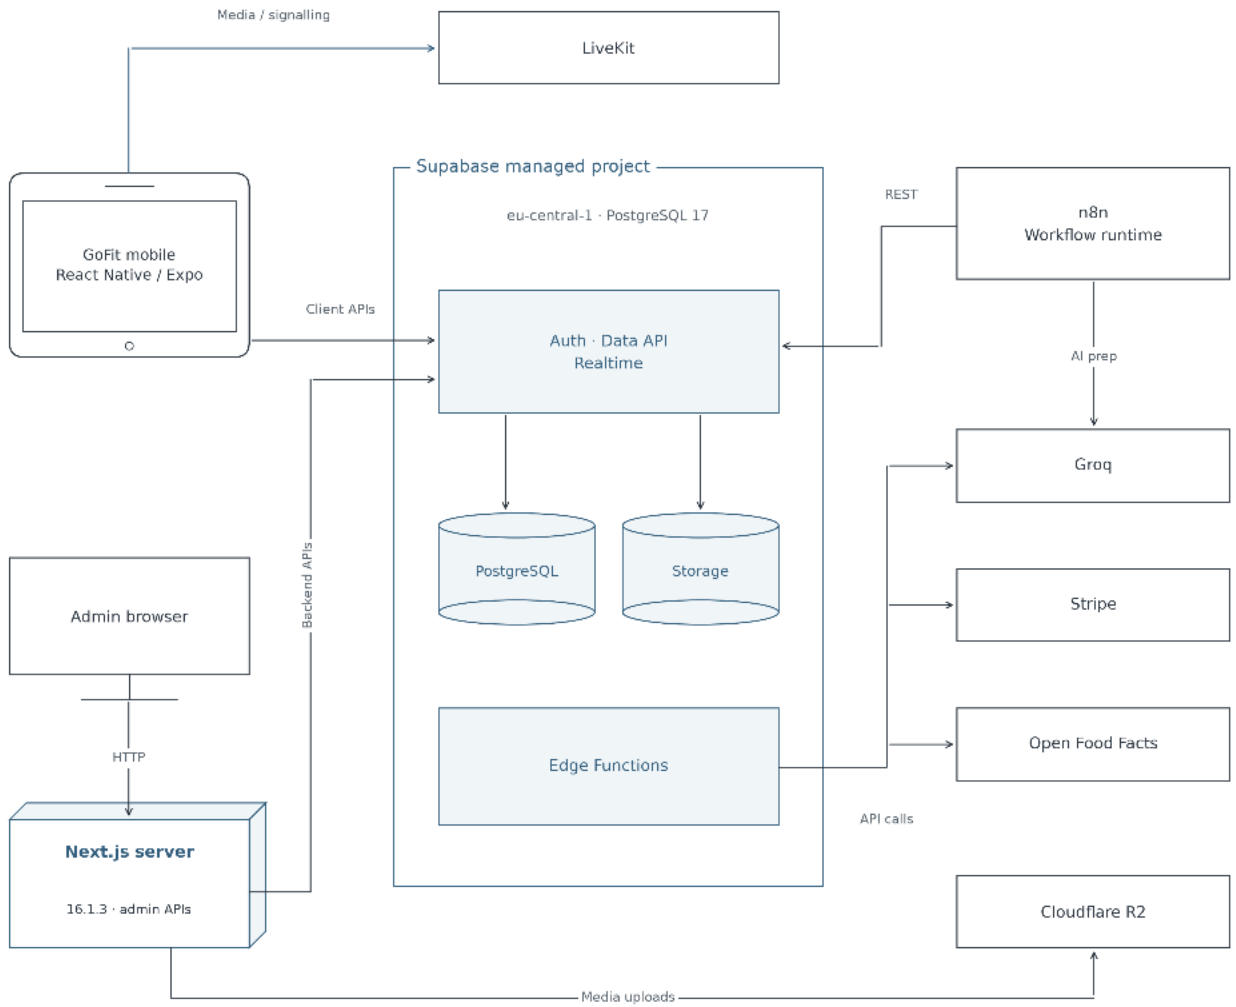

Backend and integrations

Supabase · Stripe · LiveKit · n8n

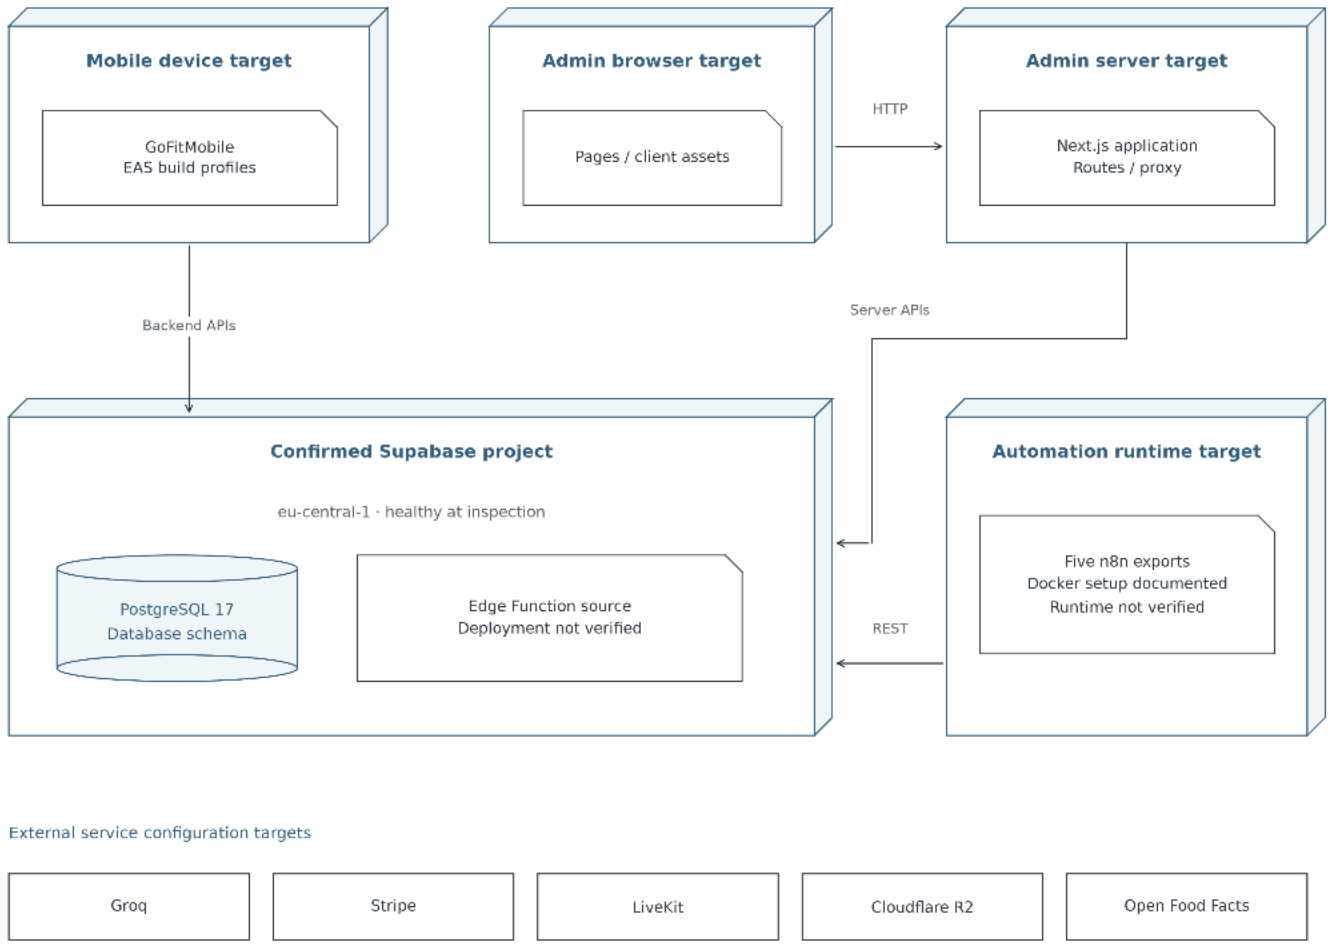

Logical architecture

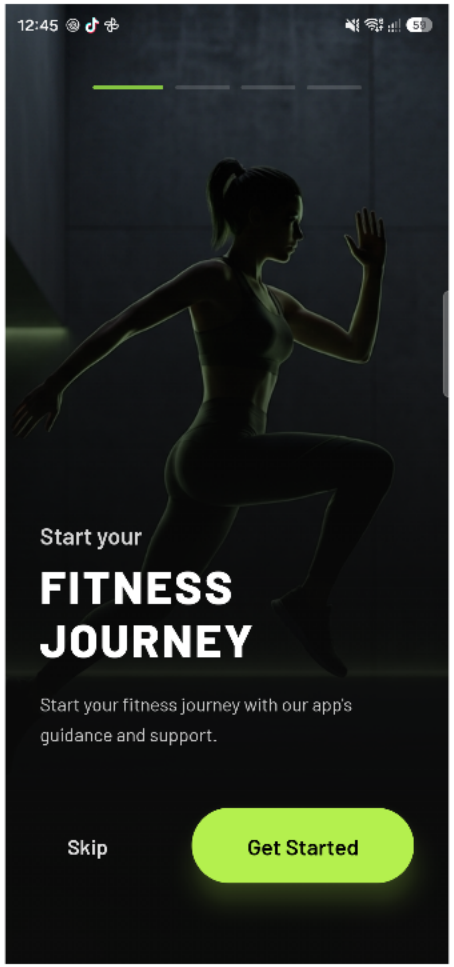

Physical architecture

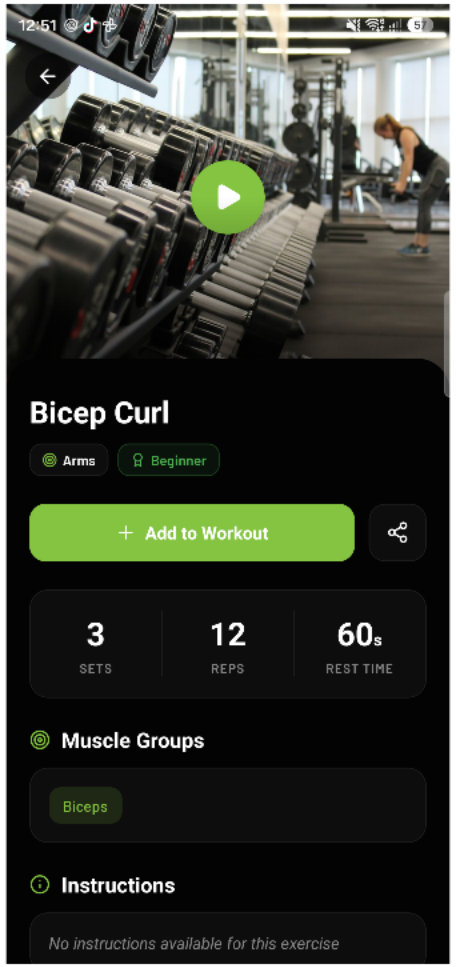

Deployment view

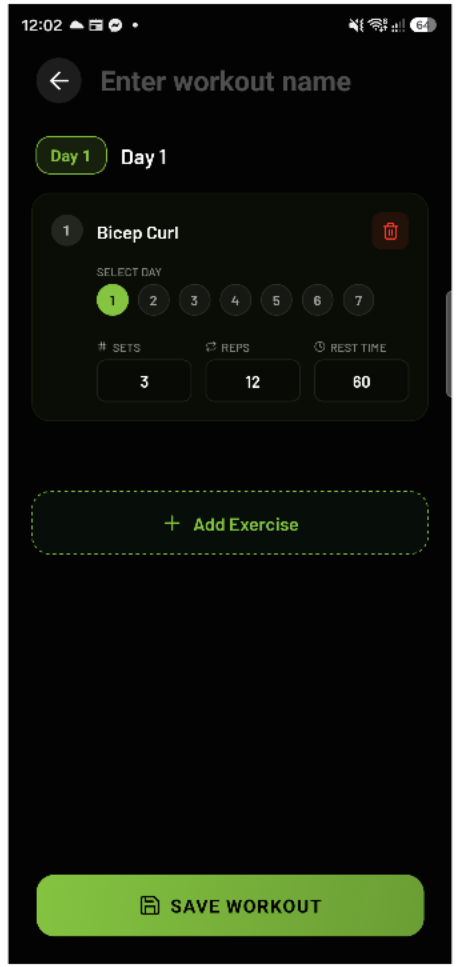

Demonstration — athlete journey

Onboarding

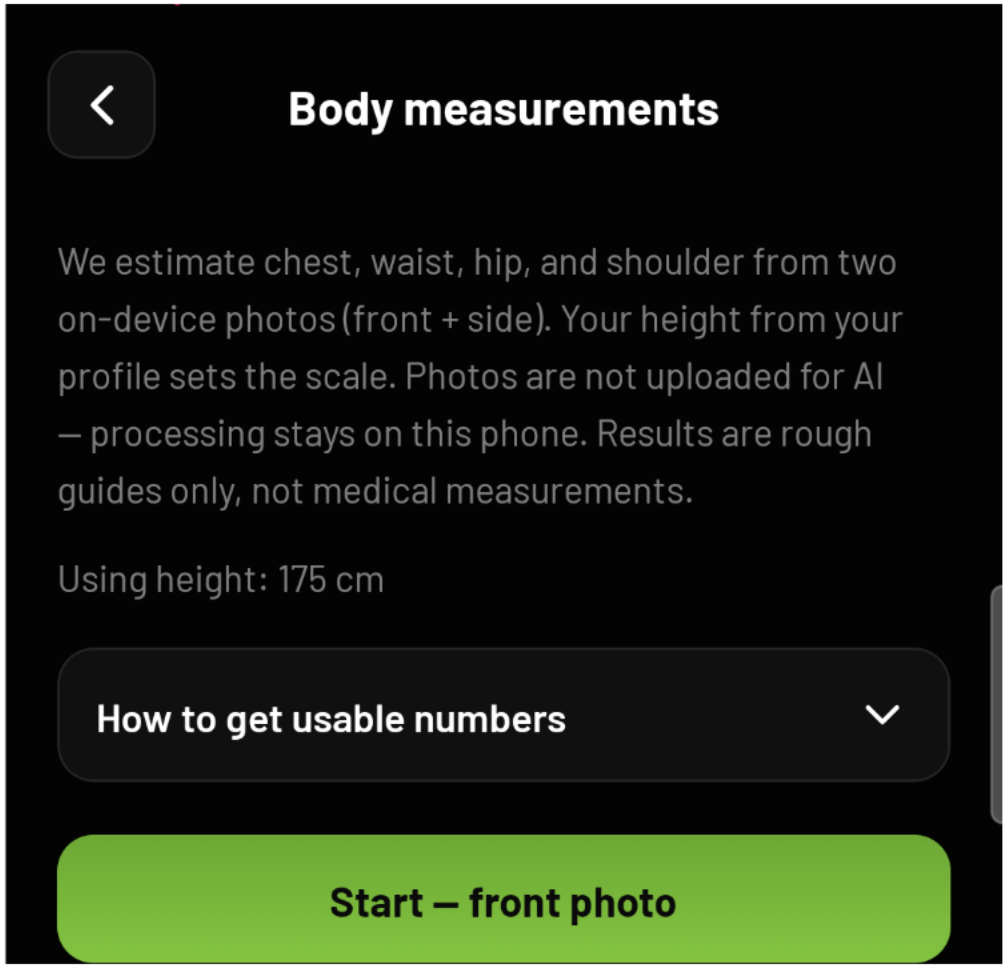

Exercise guidance

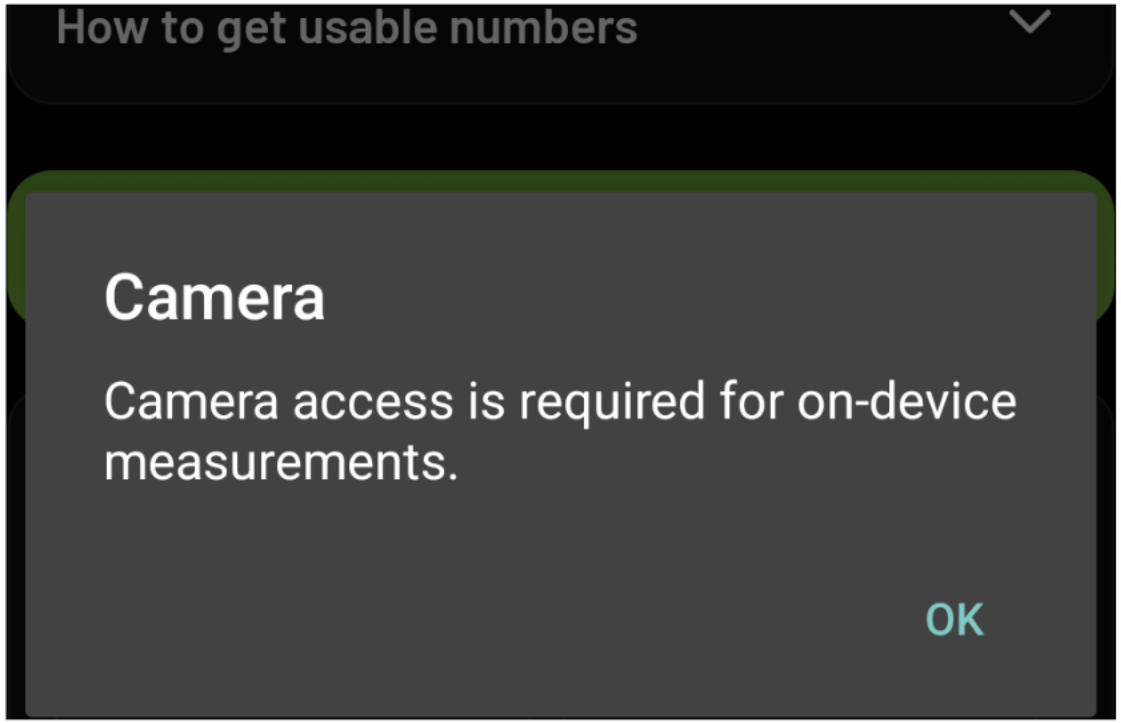

Workout builder

Body-measurement workflow

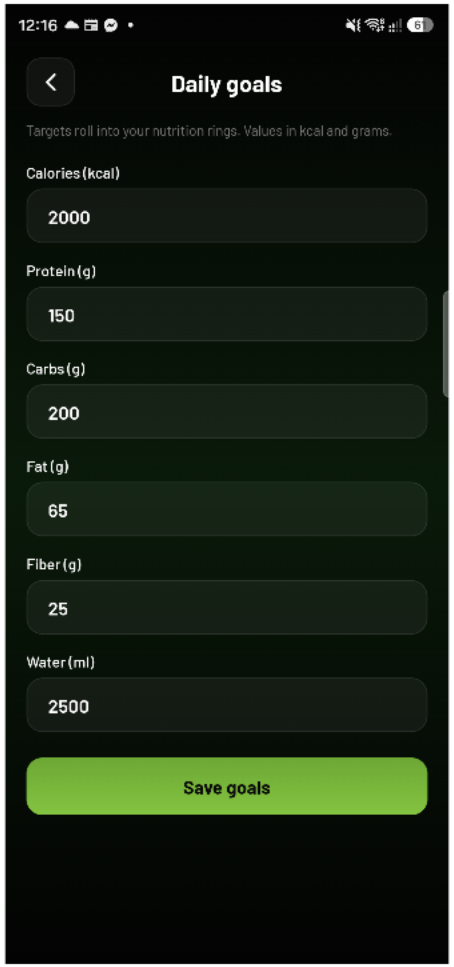

Capture guidance

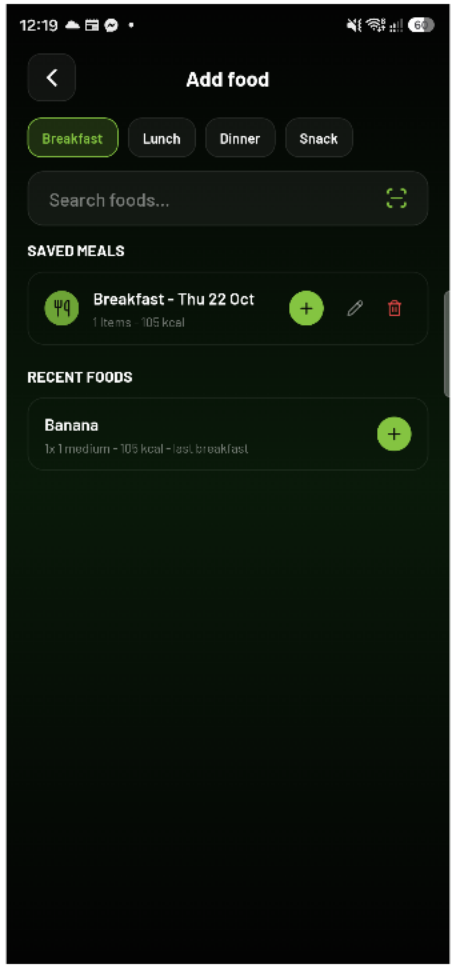

Permission handling

Guidance and permissions only; fresh end-to-end capture and accuracy remain unverified.

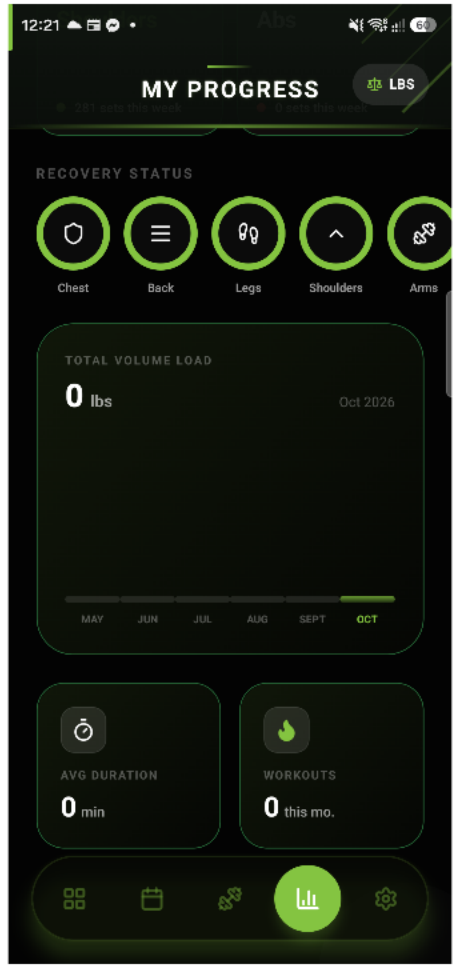

Demonstration — nutrition and progress

Nutrition goals

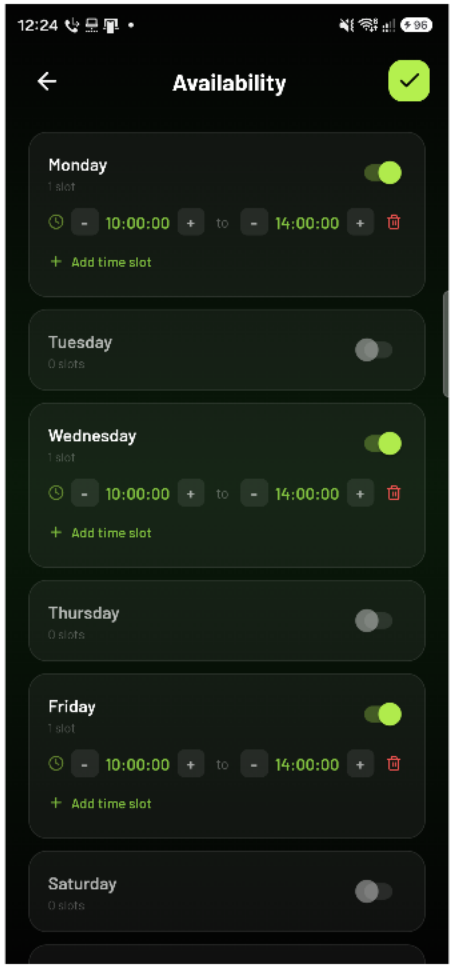

Saved meal

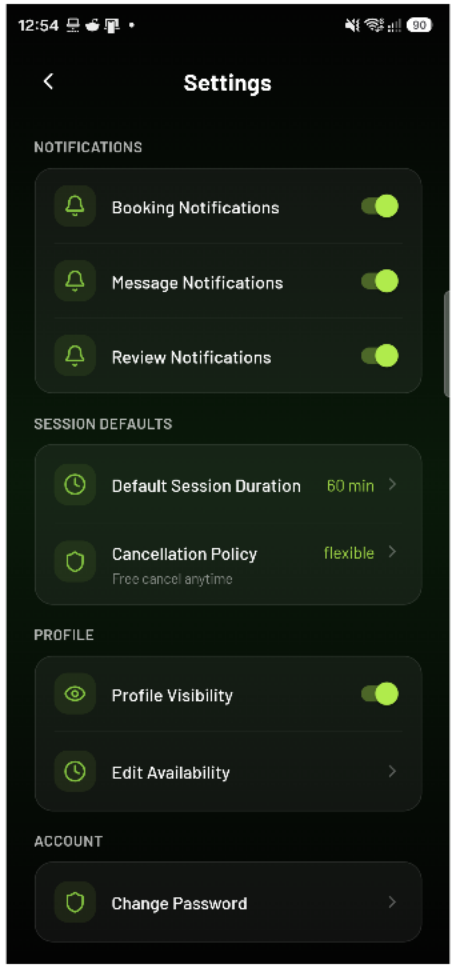

Progress chart

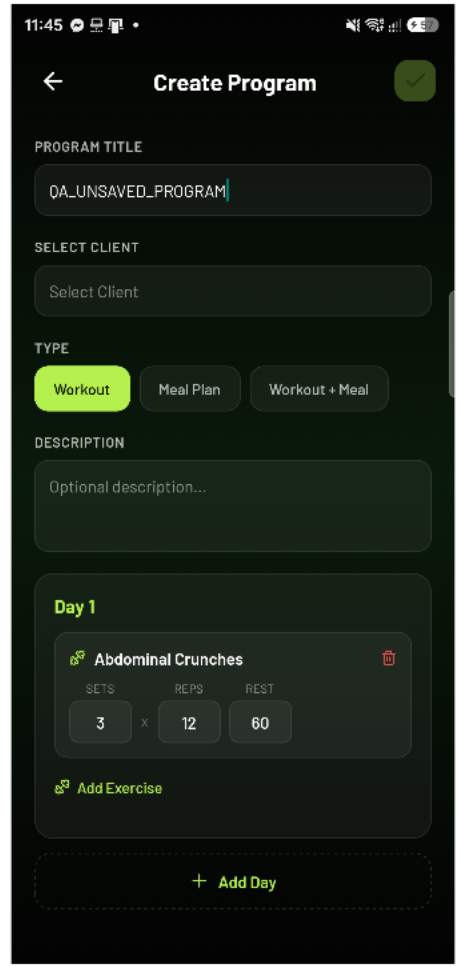

Demonstration — coach workspace

Availability

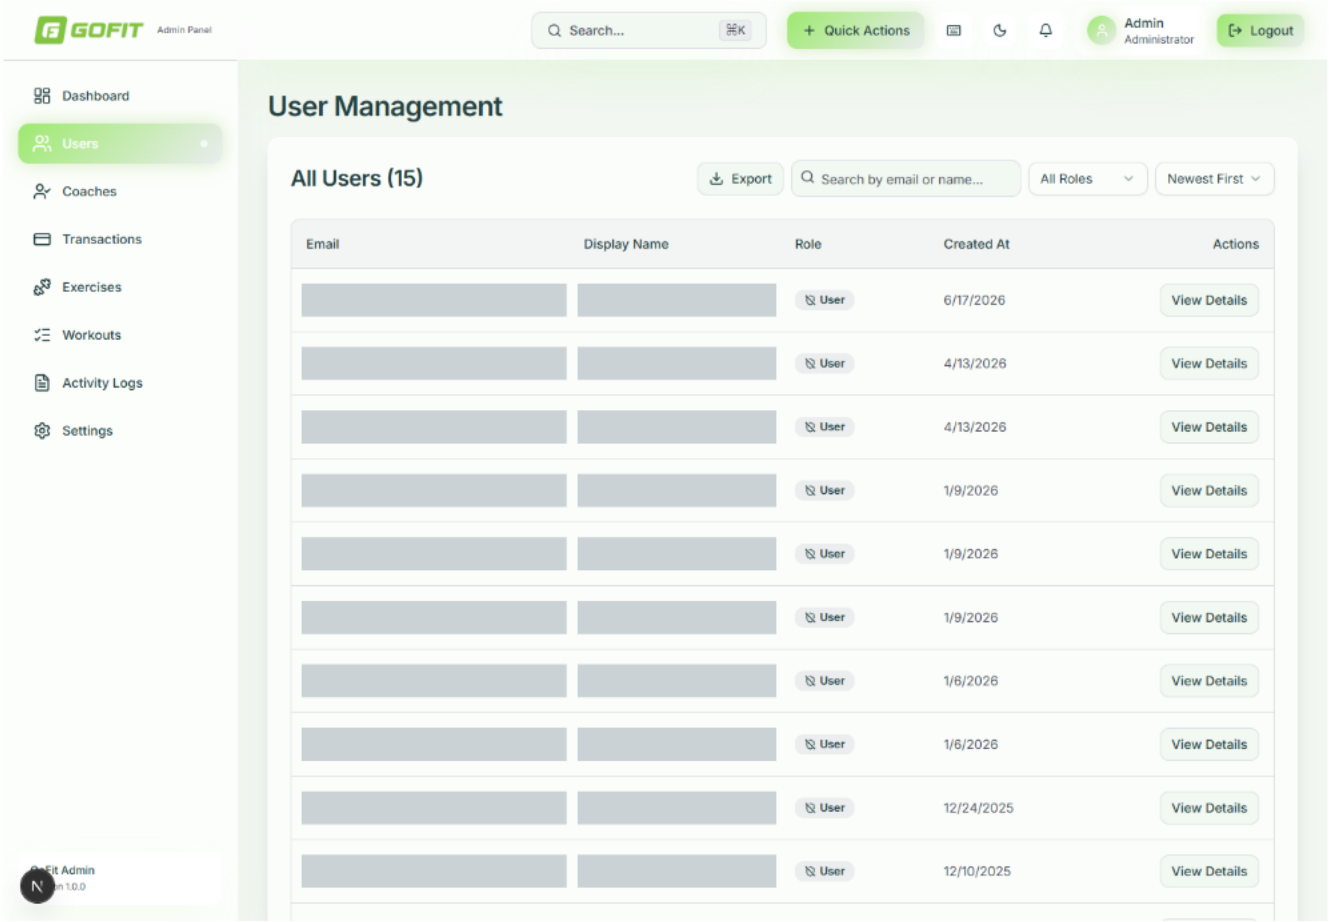

Saved session duration

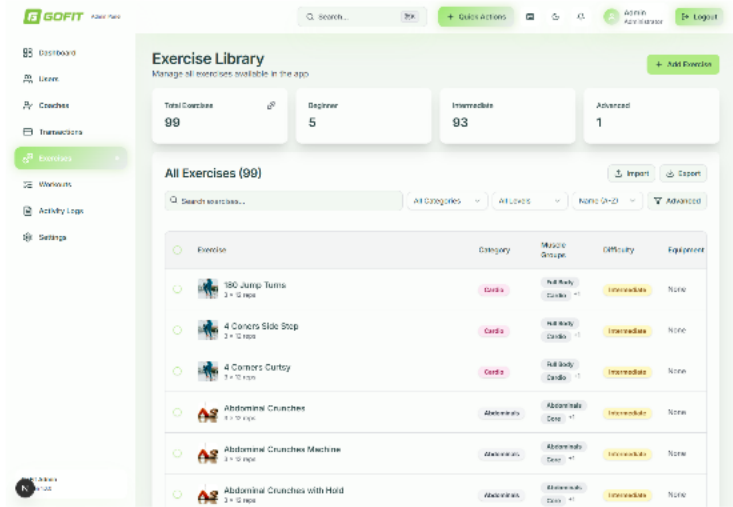

Configured program draft

A configured draft does not demonstrate successful program assignment.

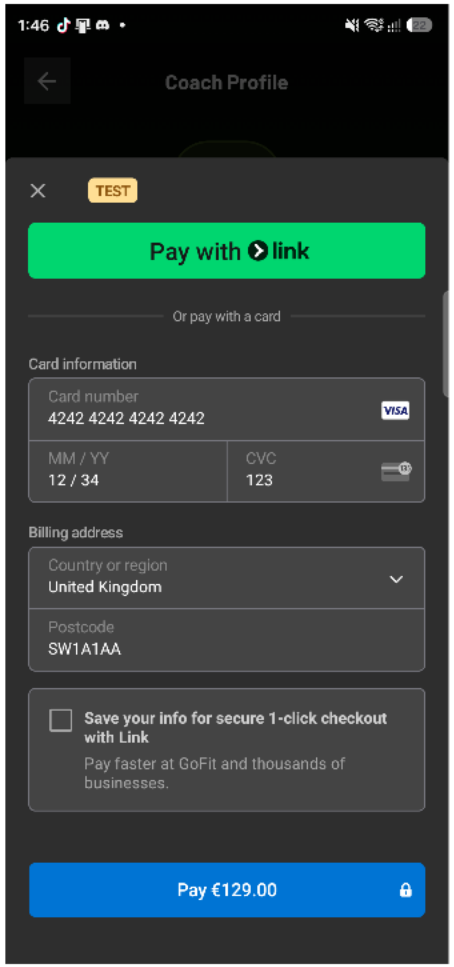

Demonstration — administration

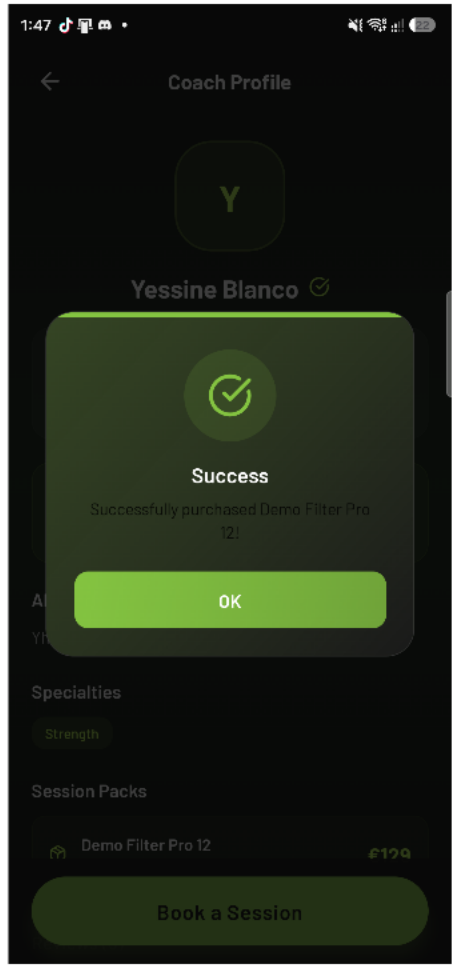

Role-based management and catalog maintenance

Demonstration — EUR sandbox payment

EUR checkout

Purchase confirmation

Verified Android case: €129 pack purchase and 12 saved credits. Sandbox only.

Validation approach

Automated tests for mobile and administration logic

Hands-on checks on one Android development device

Browser and API checks for administration and payments

October 2026 follow-up, after the internship period

Recorded automated test results

146

Mobile tests across 25 suites

34

Administration tests

Administration TypeScript check passed.
Mobile TypeScript check retained 12 pre-existing diagnostics.

Passing unit tests do not establish end-to-end provider or device behavior.

Payment records in administration

Purchase	Amount	Payment	Sessions	Status
1-on-1 session 10/26/2026, 12:00:00 PM (Berlin)	EUR 60.00	Sandbox · paid pi_3UU4MLGYNkQGJJnZ2OcTanZx	60 min	confirmed
Demo Filter Pro 12	EUR 129.00	Sandbox · paid pi_3UTs8jGYNkQGJJnZ16wenS0v	12/12	active

Sandbox purchase records are visible in the administration panel.

Evidence is limited to the recorded scenarios, not production payment certification.

Remaining validation

Device and integration checks

iOS integration and real-device testing
Two-party audio/video calls
Native standalone-session checkout

Reliability and evaluation

Offline reconciliation
Independent measurement accuracy
Scheduled automation delivery
Payment recovery, refunds and payouts

These capabilities remain unfinished or unverified within the retained evidence.

CONCLUSION
& FUTURE WORK

Built an integrated prototype covering athlete, coach and administrator workflows.

Complete outstanding device, media and AI evaluation checks.

Strengthened skills in mobile development, backend integration and evidence-based testing.

Prepare production configuration and payment recovery before release.

THANK
YOU
