26 January–26 July 2026

Information Technology

Mobile application, backend integrations and web administration

GoFit

Fitness and coaching platform

26 January–26 July 2026
Antigone Creative Agency · ESPRIT

Engineering scope: mobile application, backend integrations and web administration

Problem statement

How can one platform connect independent training with professional coaching?

Study of existing conditions

Activity	Separate records	Integration needed
Athlete follow-up	Workout log, food diary and measurements	One account linking training, nutrition and progress
Coach operations	Programs, messages, appointments and payments	Connect each session with its client context
Administration	Accounts, coach reviews and catalogs	Centralized role-specific oversight

The existing-workflow analysis defines the integration requirements for GoFit.

Limits of fragmented workflows

Repeated entry

The same information may need to be entered in several places.

History

Disconnected records make longitudinal follow-up harder.

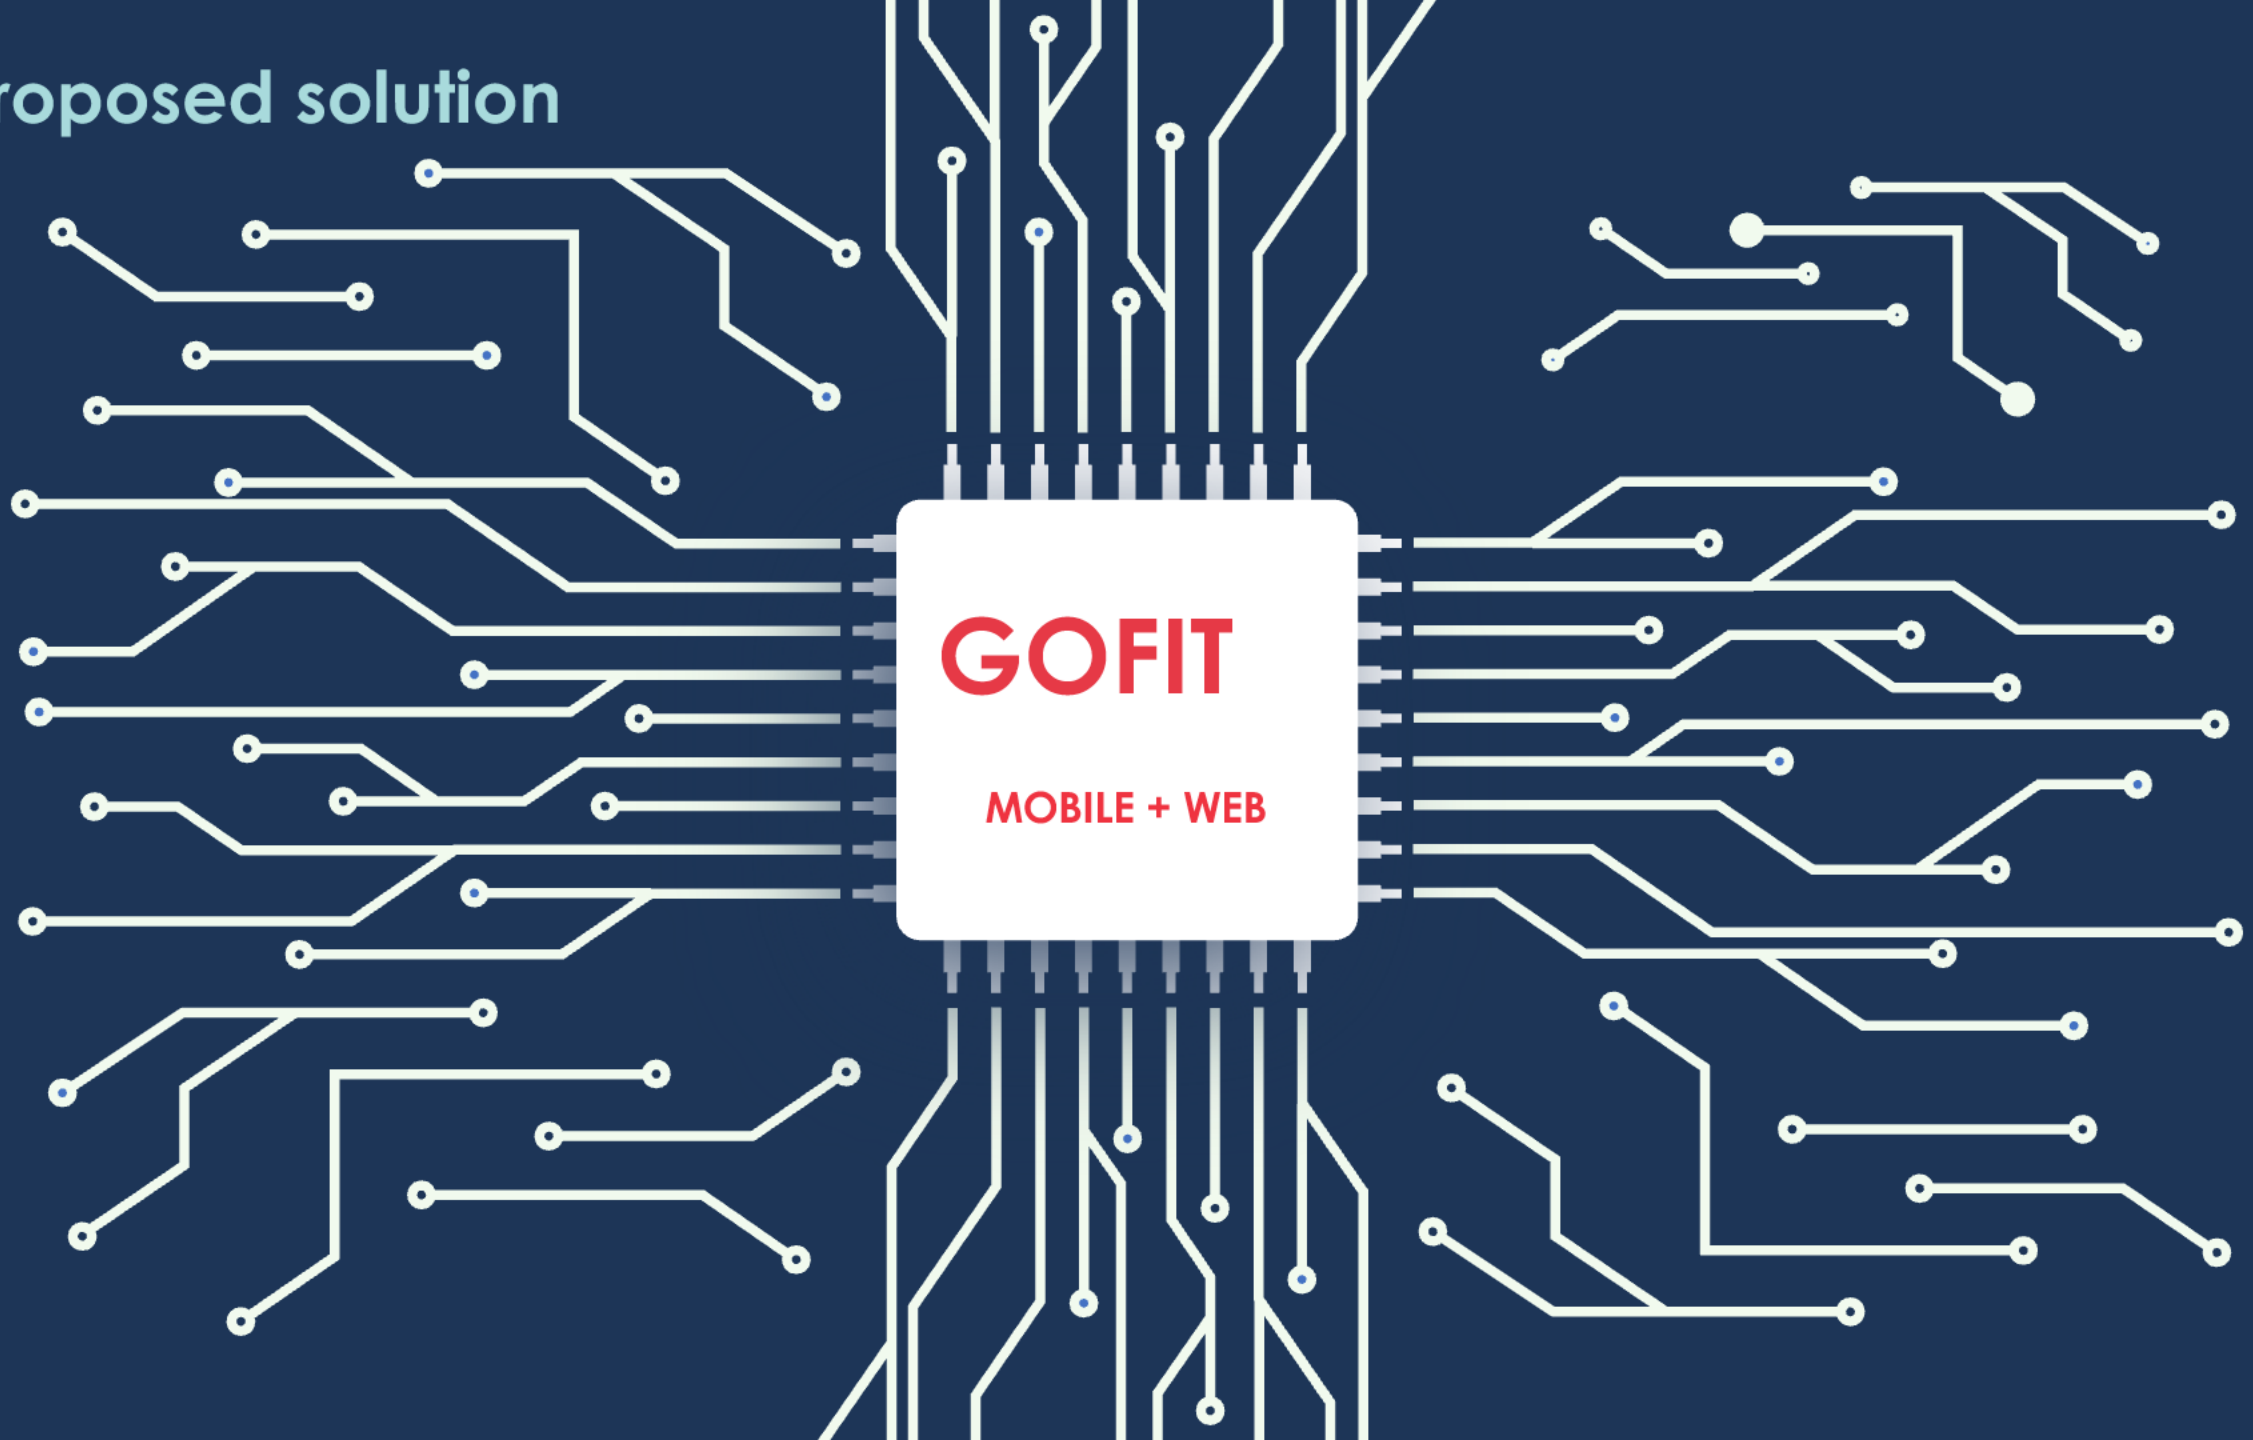

Continuity

Separate tools interrupt the athlete–coach workflow.

Access

Shared information requires explicit access boundaries.

Proposed solution

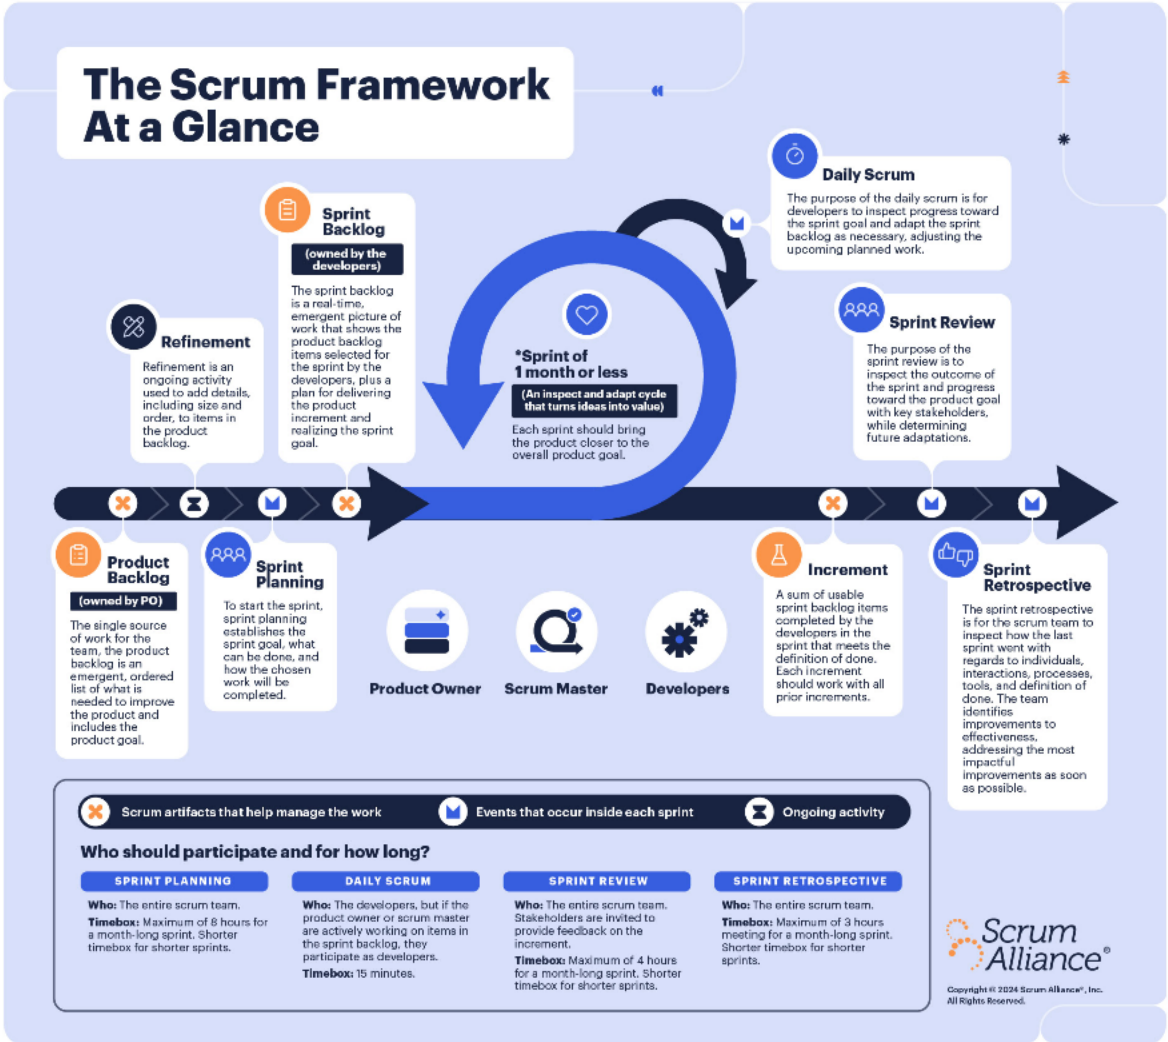

Development methodology — comparison and choice

Approach	Work organization	Relevance to GoFit
Predictive	Upfront planning and staged delivery	Useful where scope is comparatively stable
Kanban	Continuous flow and work-in-progress limits	Useful for ongoing work and maintenance
Scrum	Product Backlog, Sprint Goal and inspection	Reference for planned incremental development

Scrum provides the methodological reference. UML supports requirements and design modelling.

Development methodology

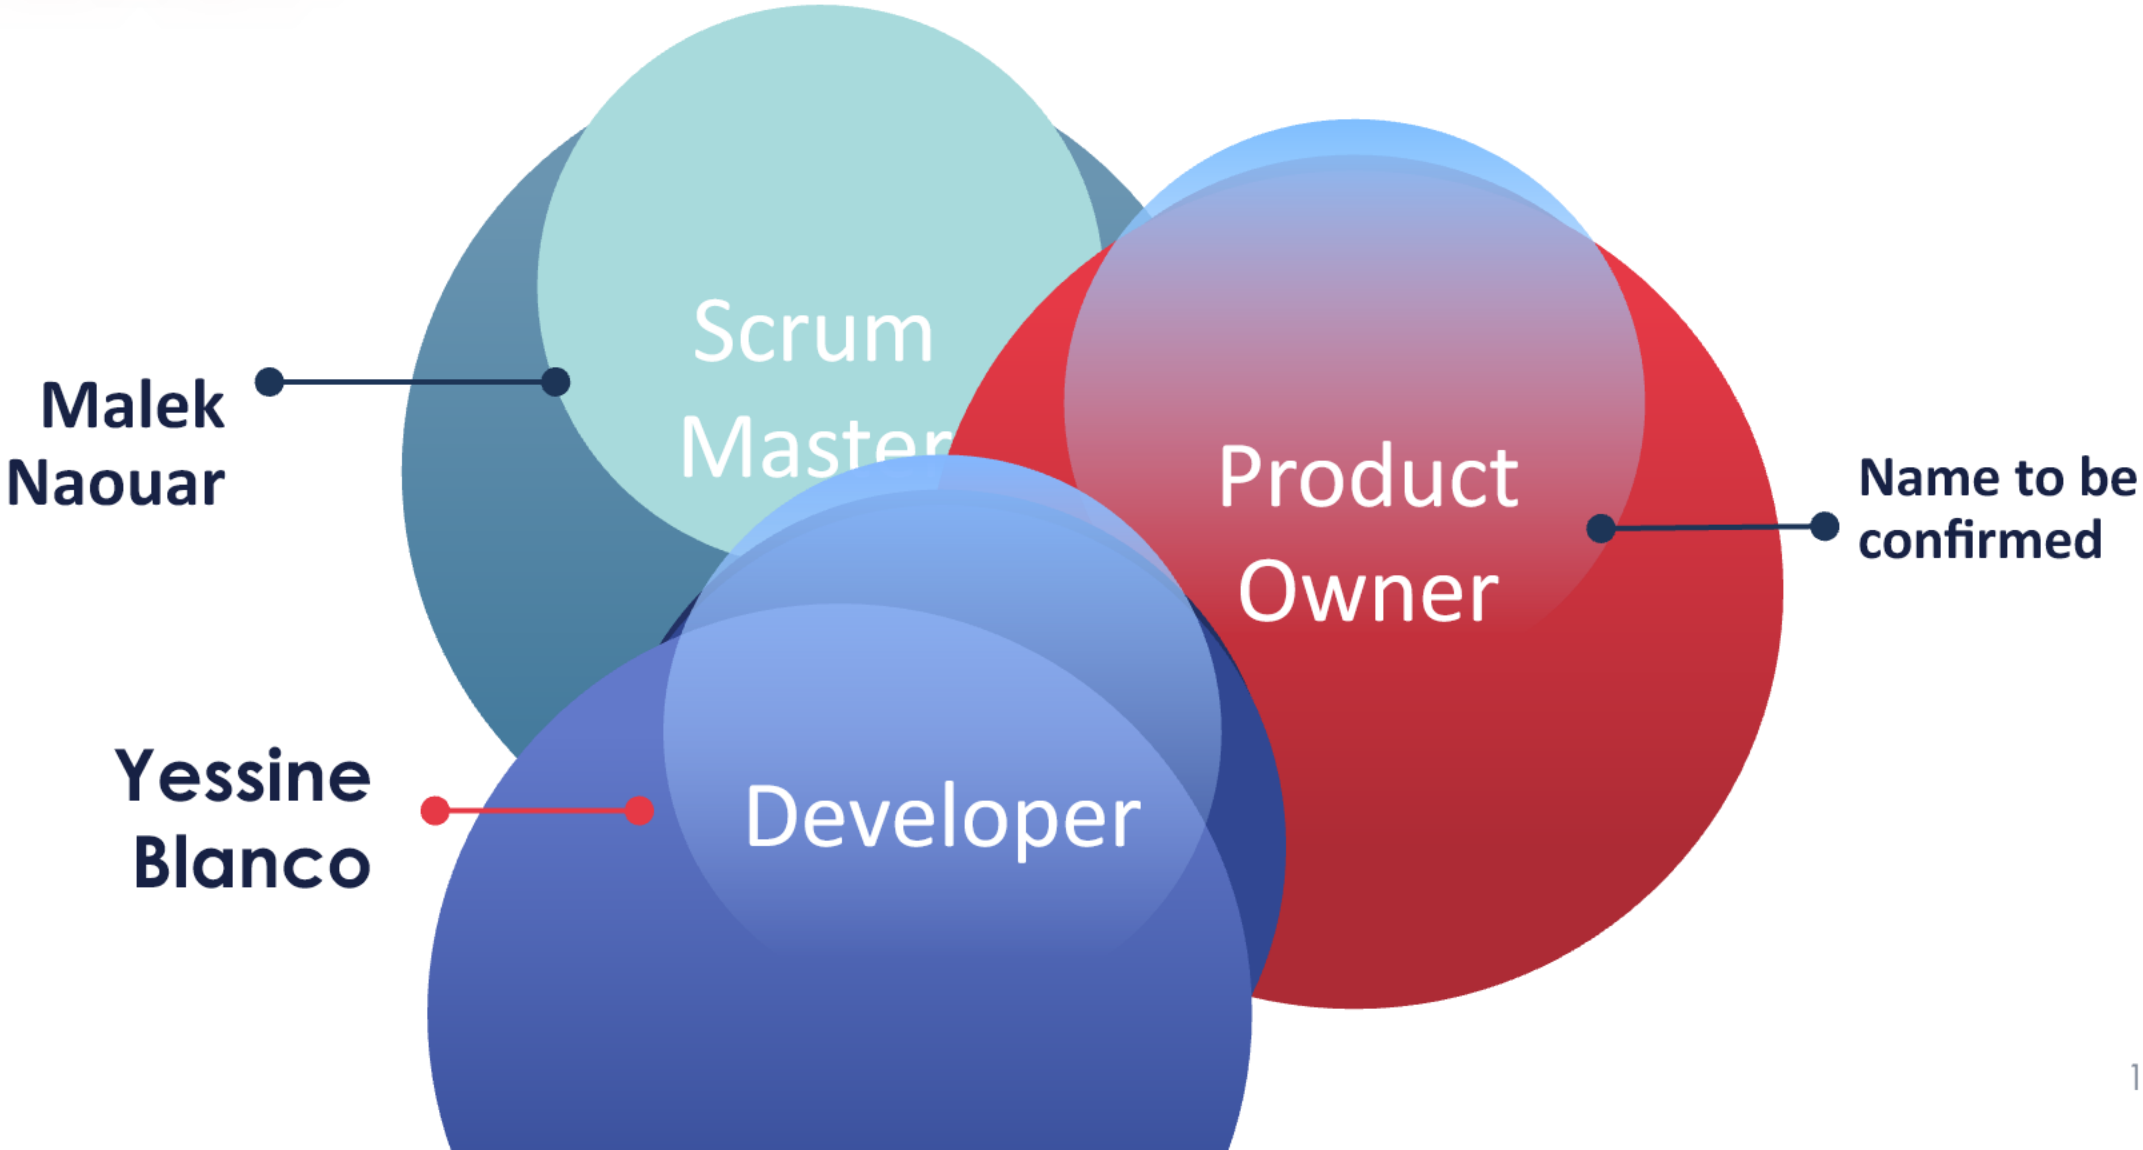

GoFit work organization

Sprint 0: Requirements
Sprint 1: Training core
Sprint 2: Nutrition & progress
Sprint 3: Coaching & admin

Report chapters group scope; exact sprint-to-chapter dates remain unverified.

GoFit Scrum team

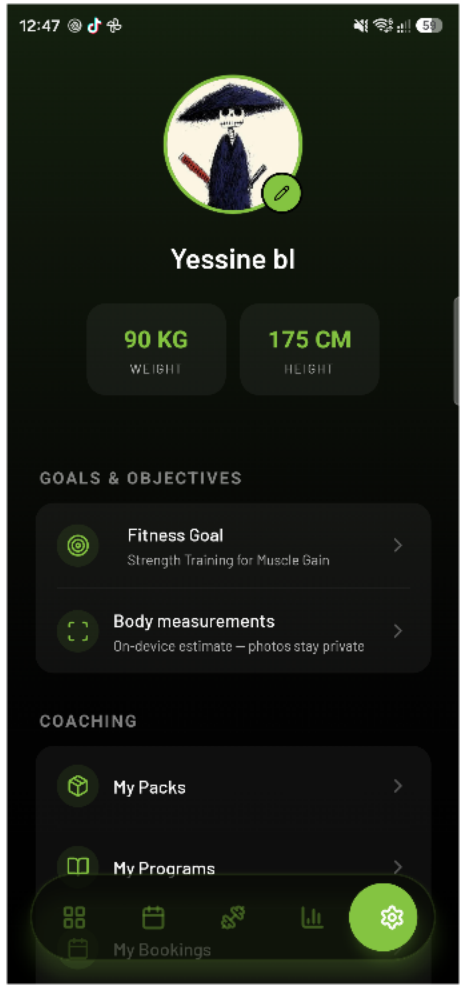

Functional requirements — athlete

Create a profile and personalize preferences

Build and execute workouts

Record nutrition, progress and measurement drafts

Discover coaches and access coaching offers

Functional requirements — coach and administrator

Coach

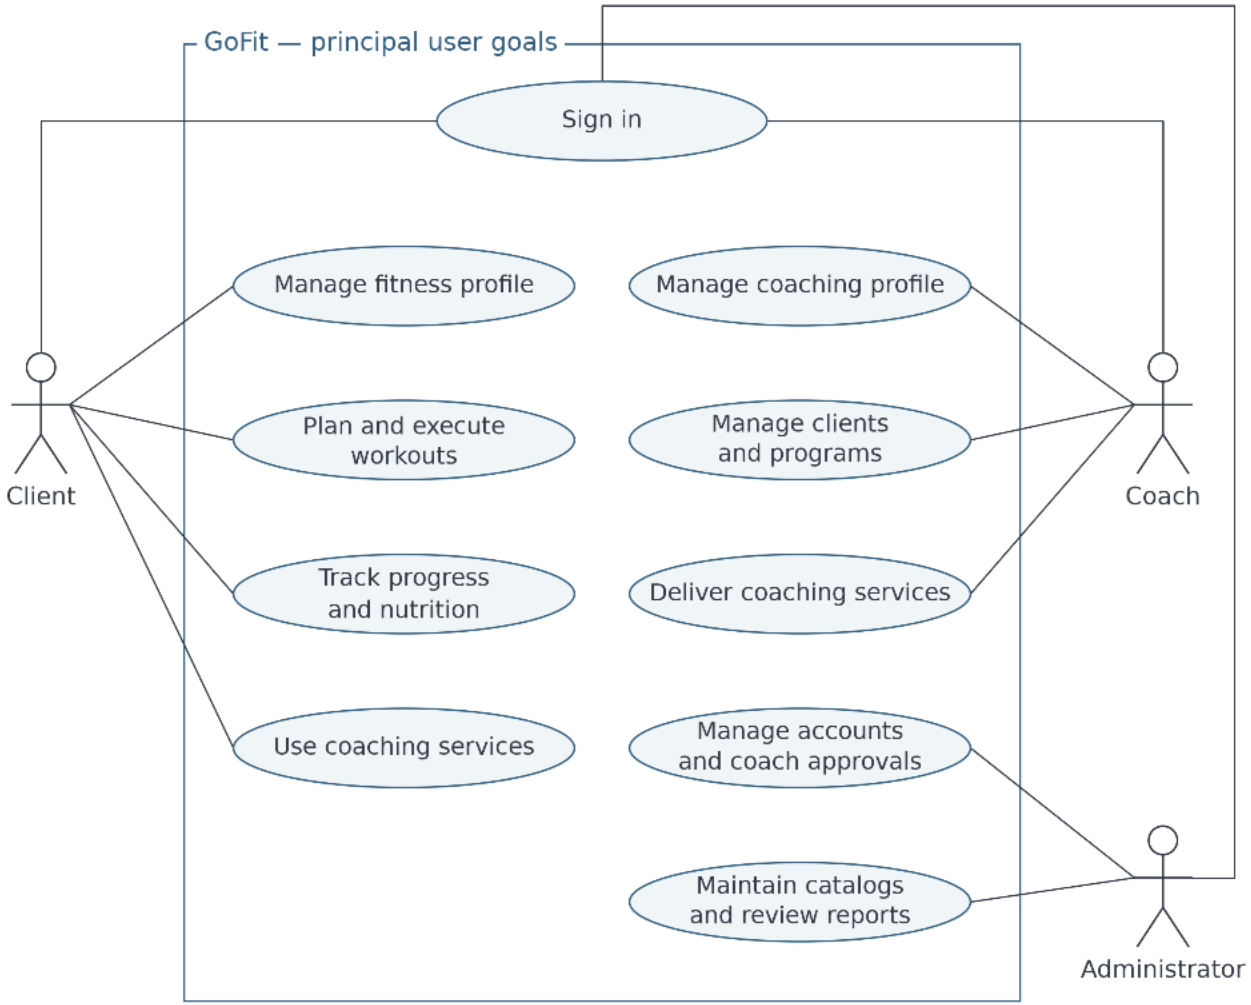

Programs and client follow-up
Availability, sessions and packs
Messages, notes and AI briefings

Administrator

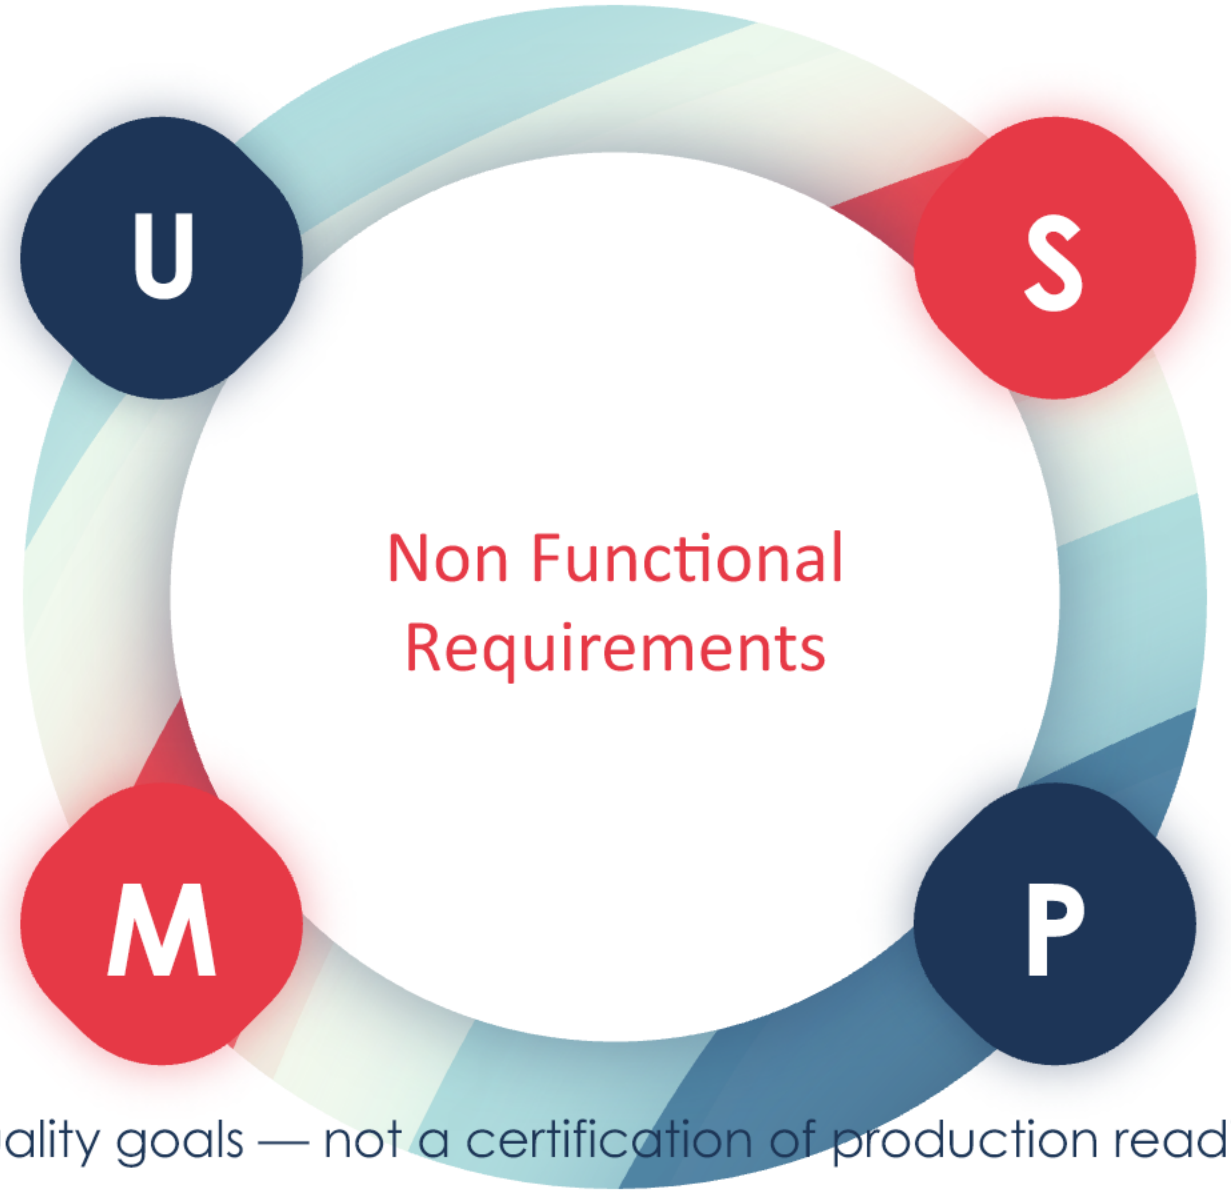

User and coach management
Exercise and workout catalogs
Transaction inspection and audit

Requirements describe intended scope; validation status is presented separately.

Global use case diagram

Non Functional Requirements

Usability

Security

Maintainability

Performance

Quality goals — not a certification of production readiness

Technologies and tools

Mobile

React Native · Expo · TypeScript
Zustand

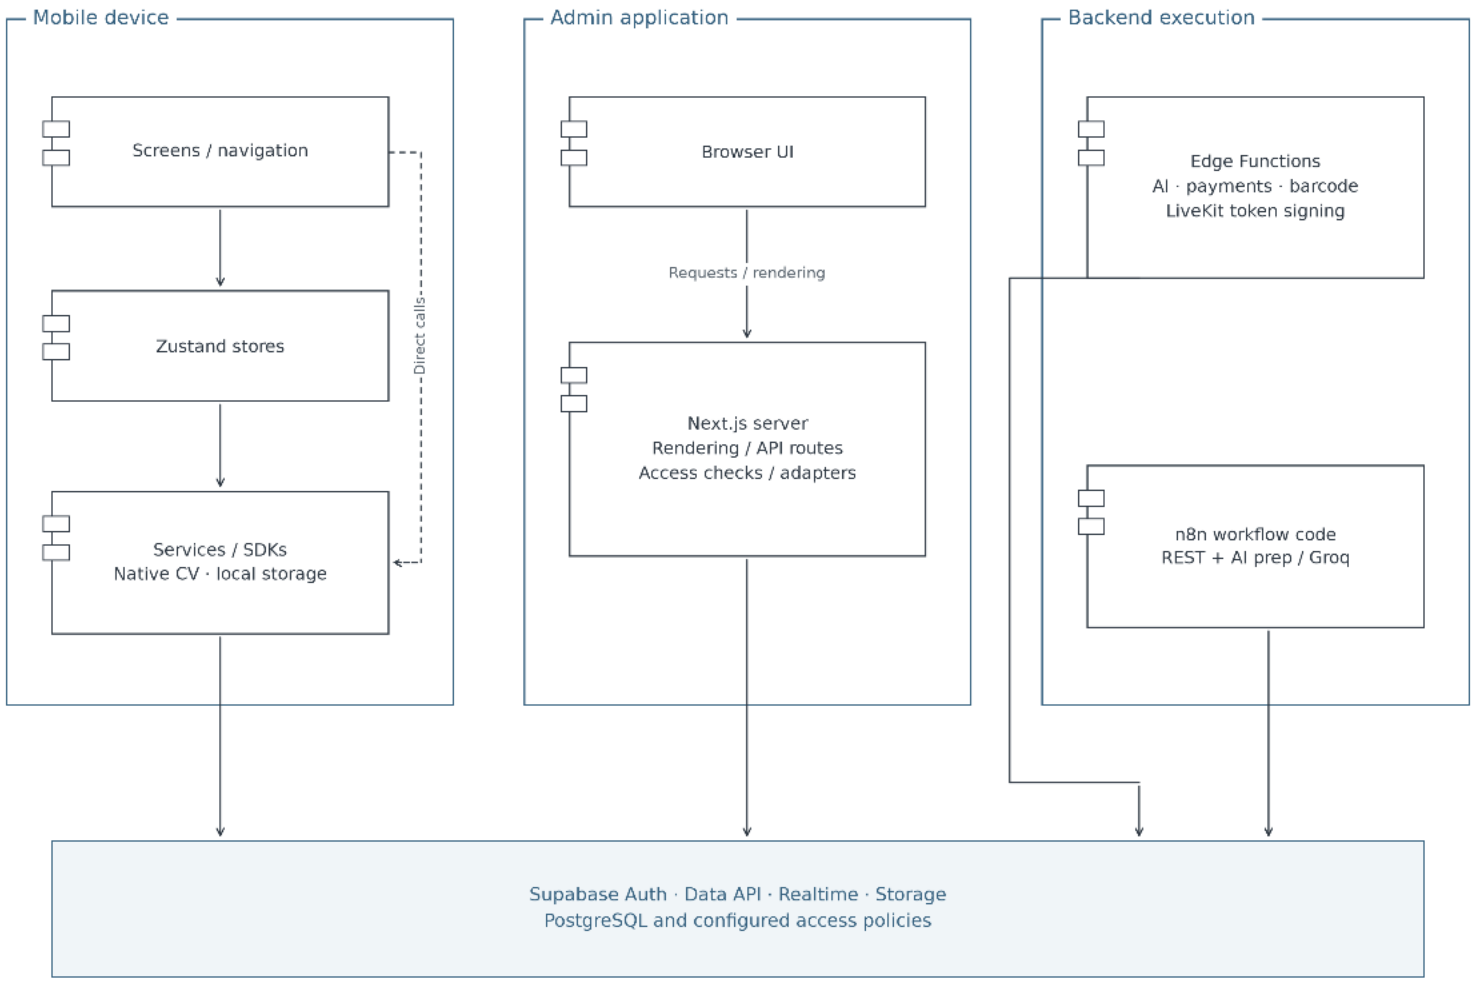

Administration

Next.js · React · TypeScript
Tailwind CSS

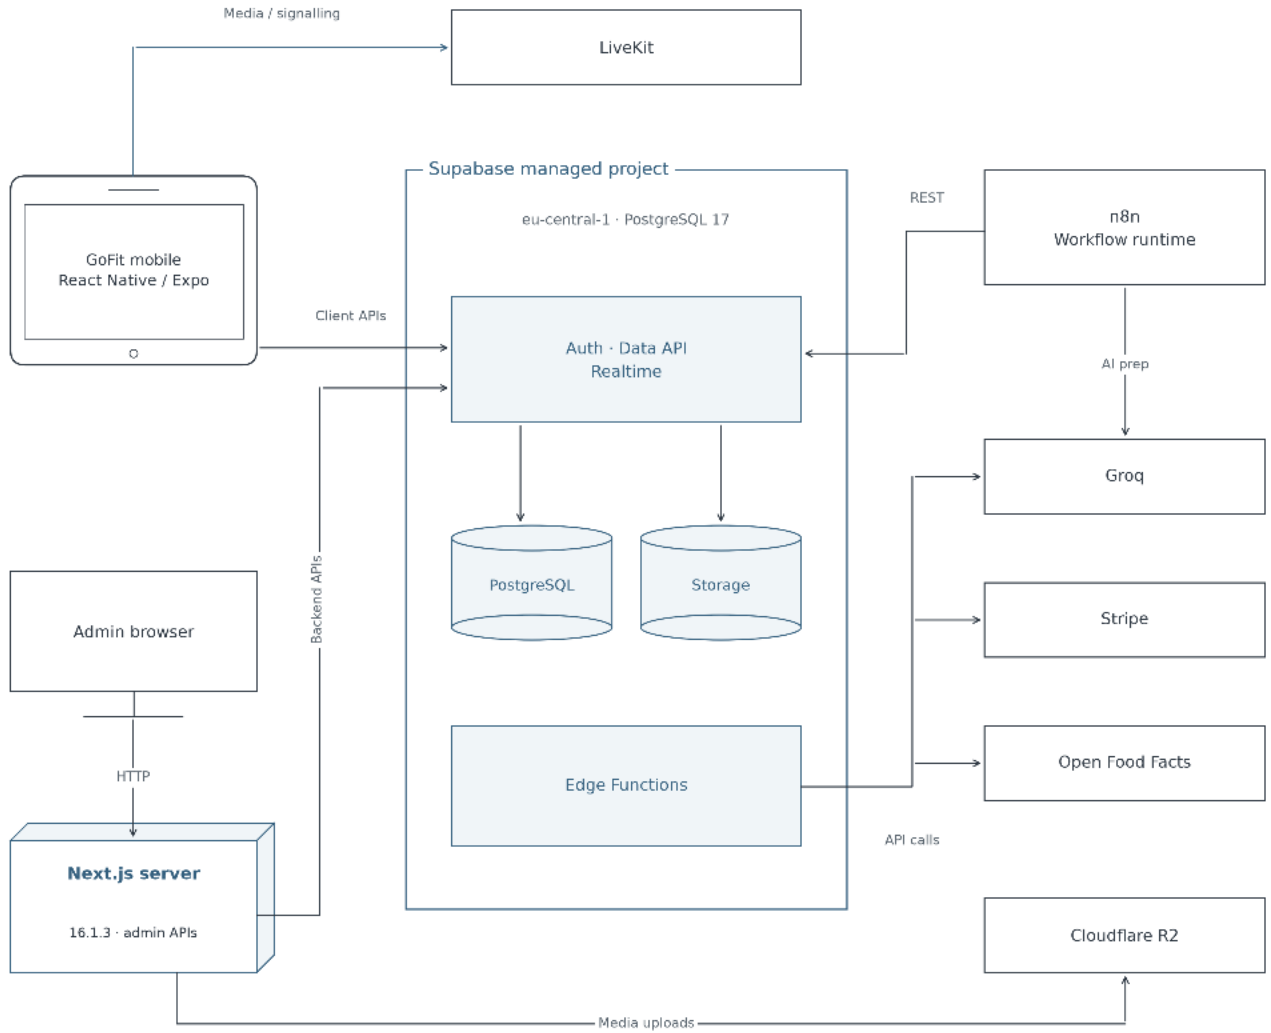

Backend and integrations

Supabase · Stripe · LiveKit · n8n

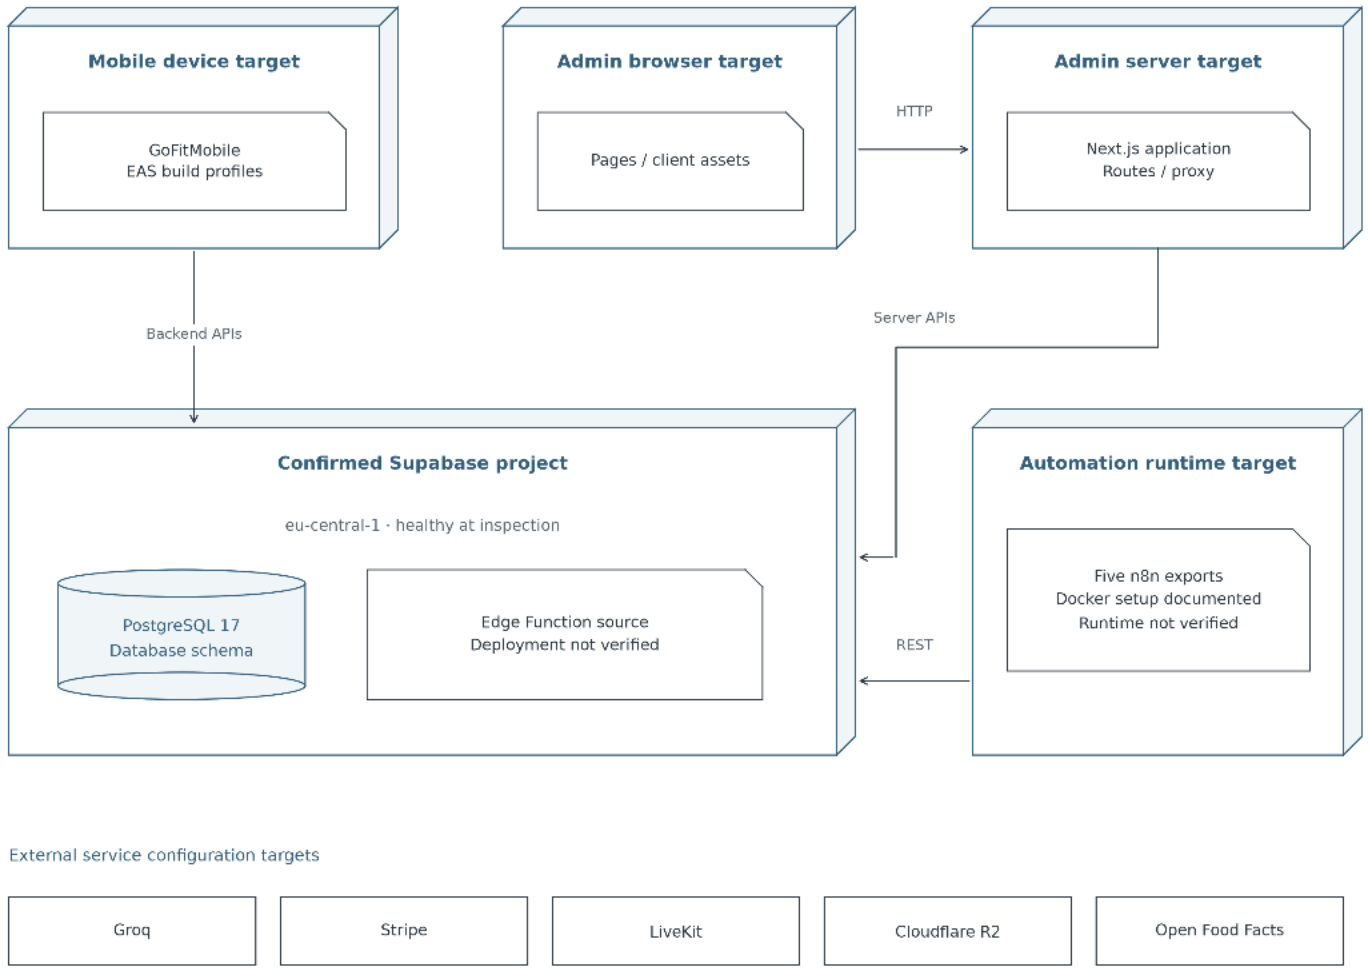

Logical architecture

Physical architecture

Deployment diagram

Demonstration

Athlete journey

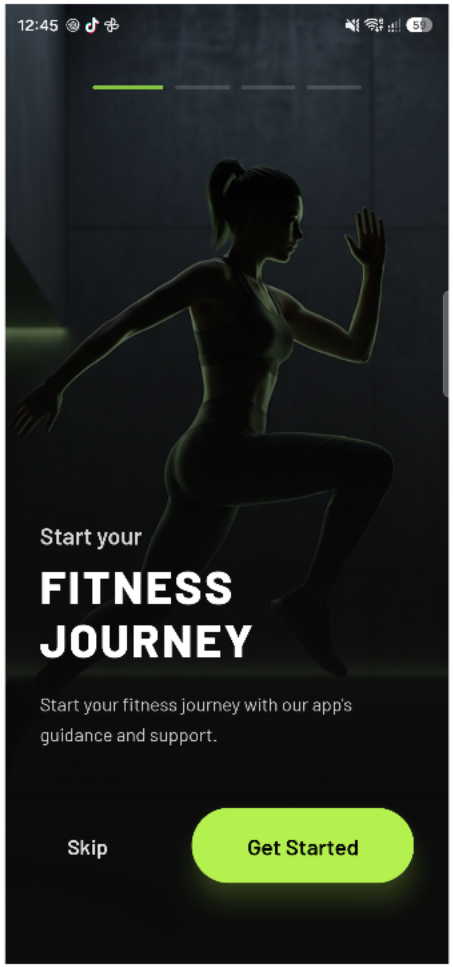

Profile, training, nutrition and progress

Coach workspace

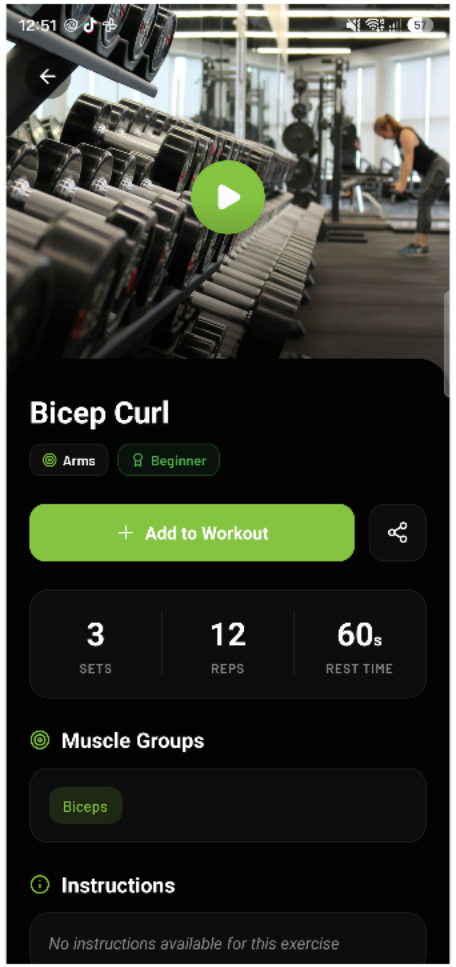

Programs, availability and client context

Administration and sandbox payments

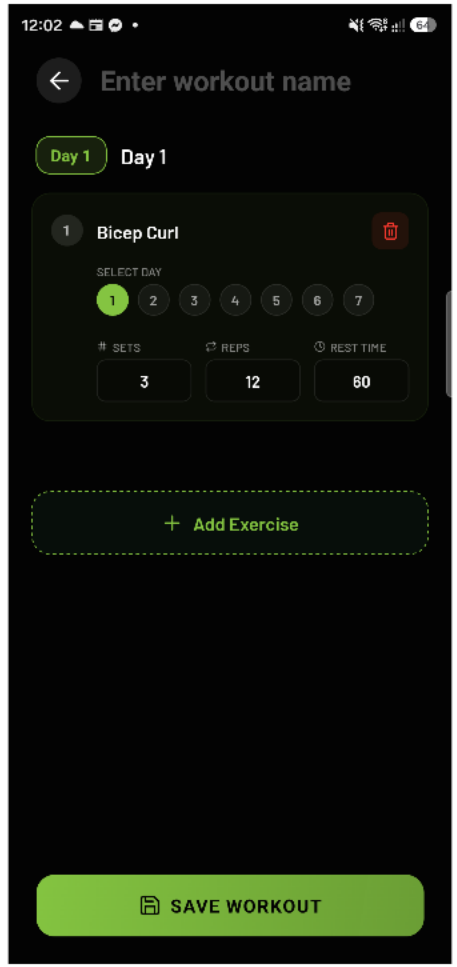

Demonstration — athlete journey

Onboarding

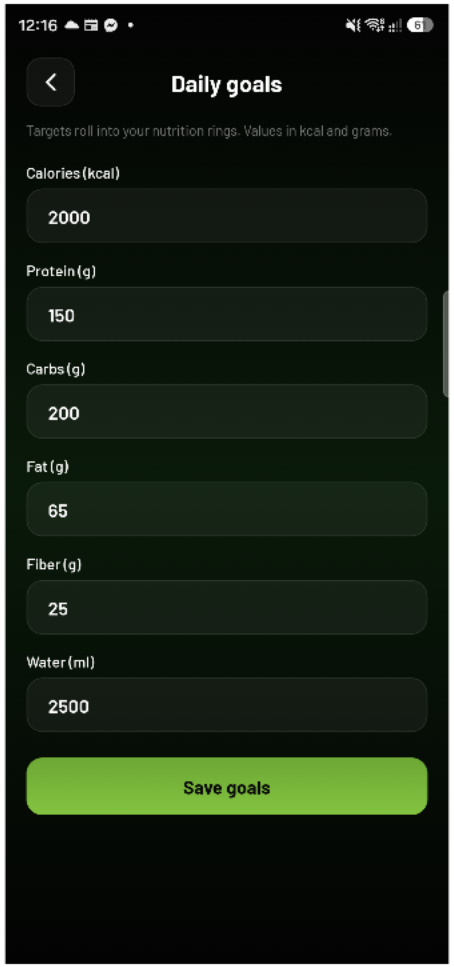

Exercise guidance

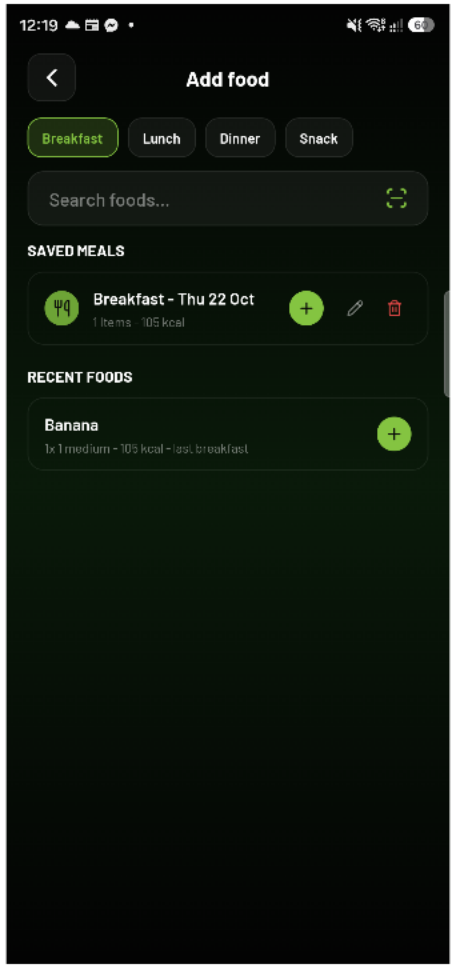

Workout builder

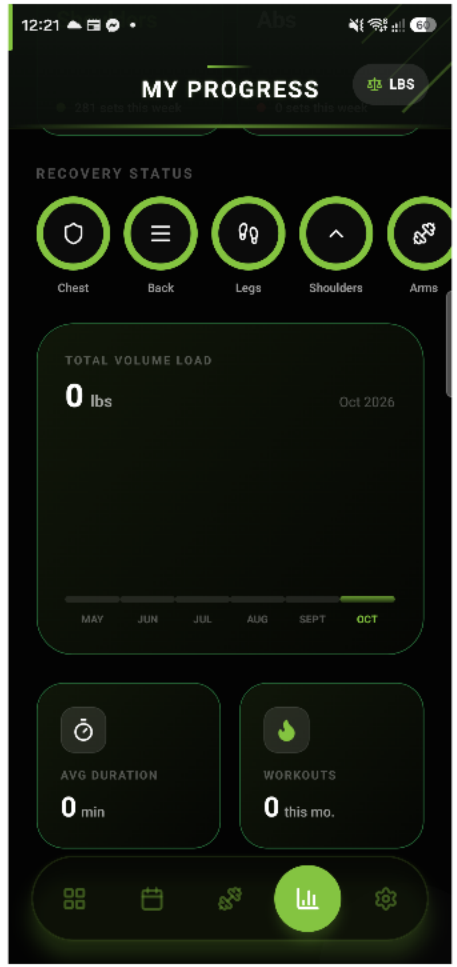

Demonstration — nutrition and progress

Nutrition goals

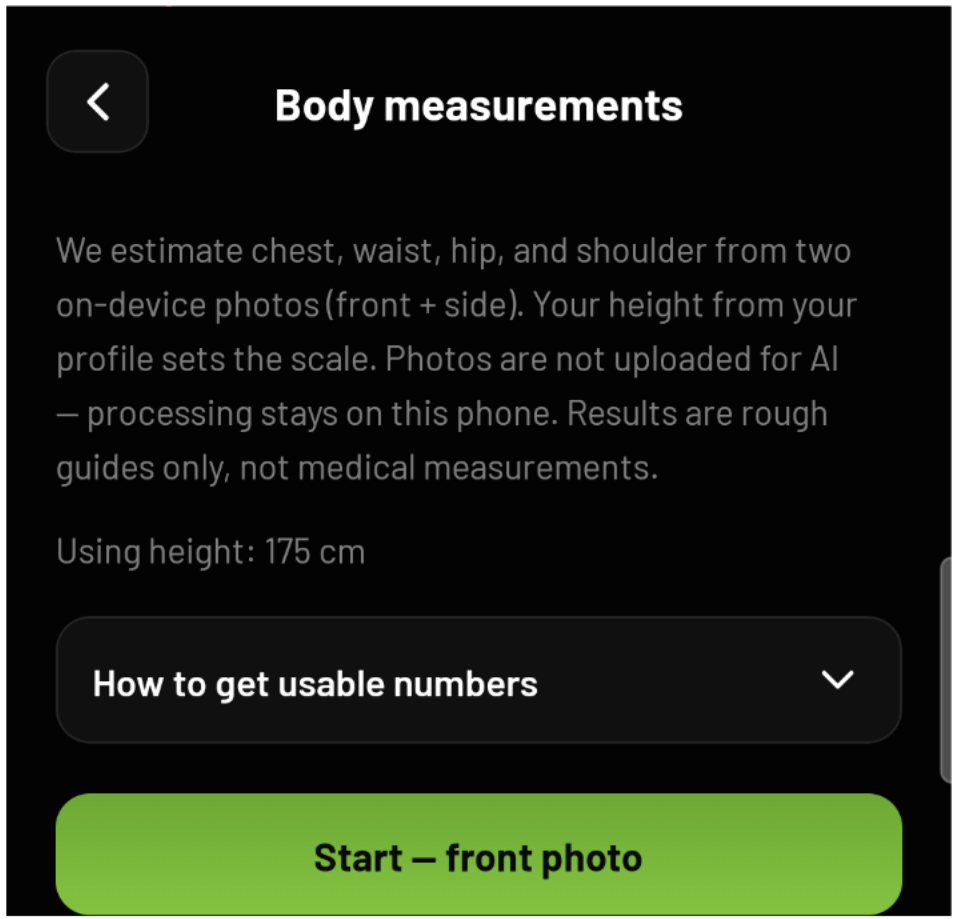

Saved meal

Progress chart

AI assistance and body-progress tracking

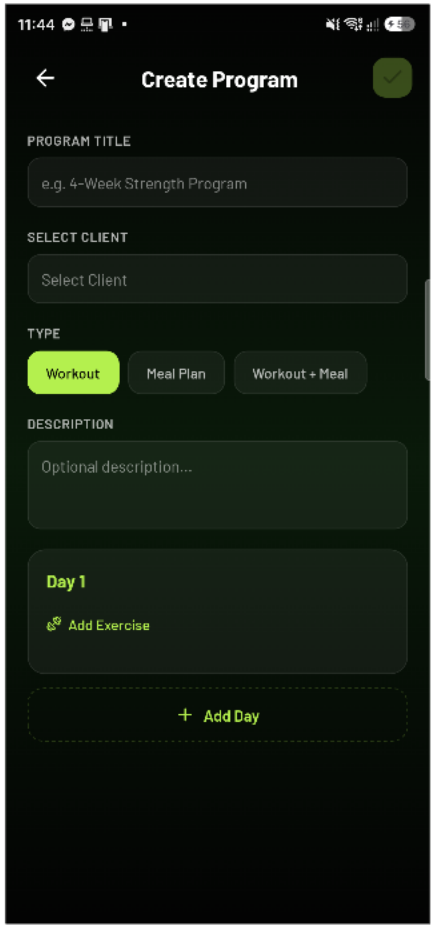

Local capture and processing

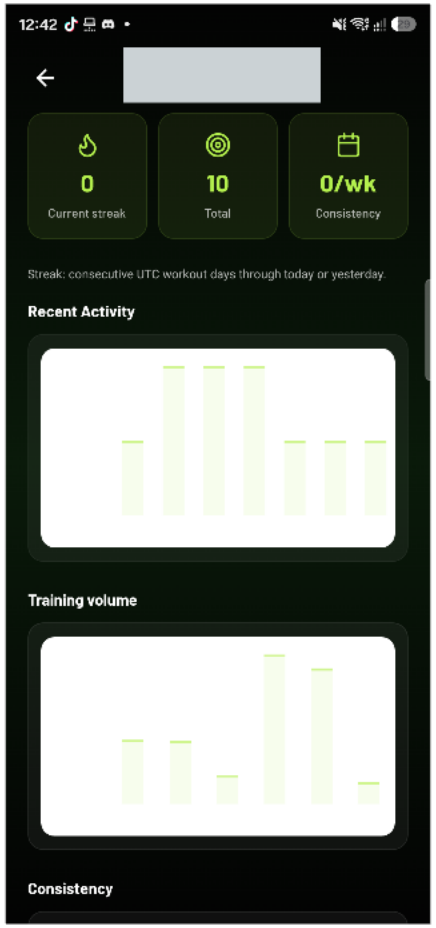

Reviewable numerical drafts
Workout recommendation paths
Coach-context briefing paths

Independent accuracy and fresh generation remain unverified.

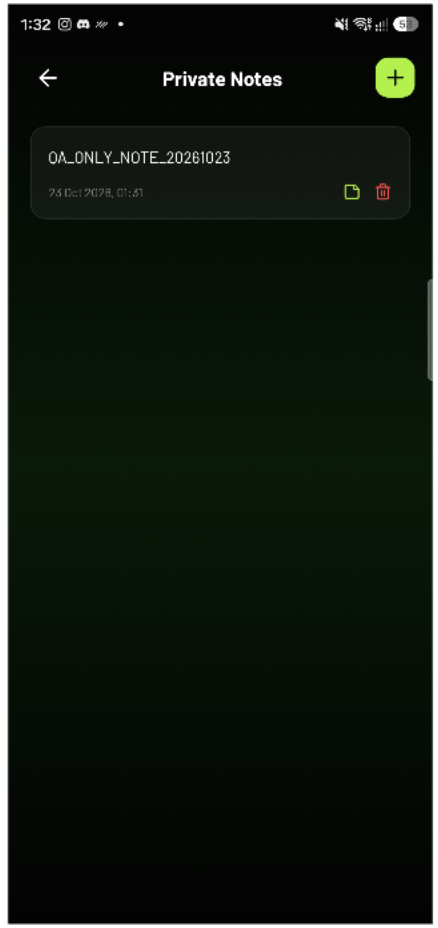

Demonstration — programs and client follow-up

Program creation form

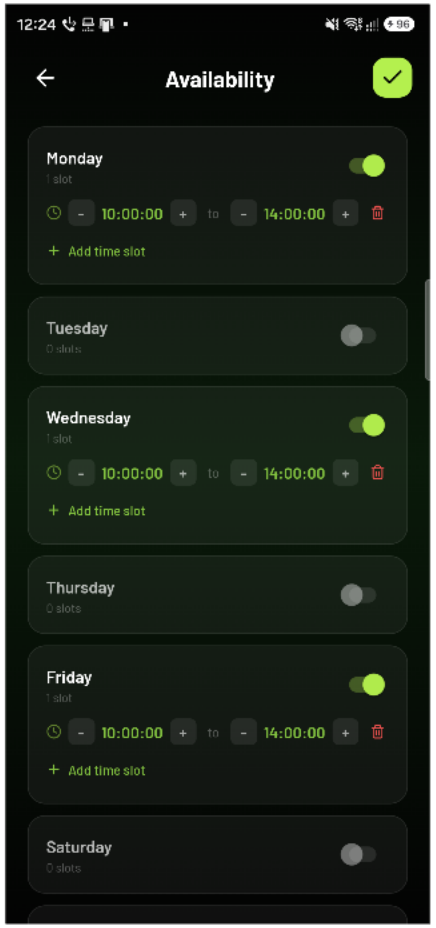

Client progress view

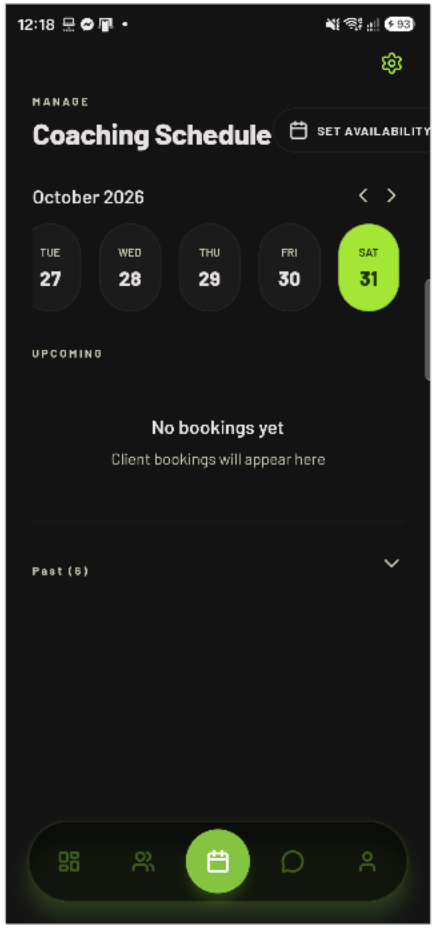

Coach note

Form and view evidence does not prove the complete program-assignment workflow.

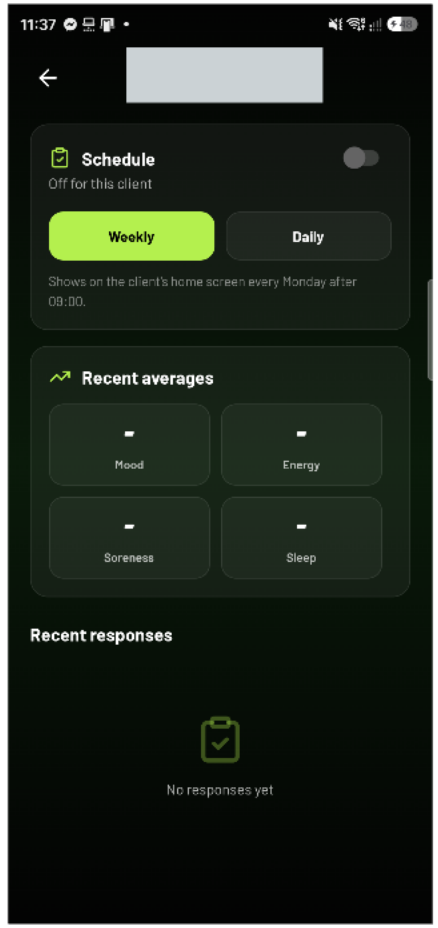

Demonstration — availability and scheduling

Availability

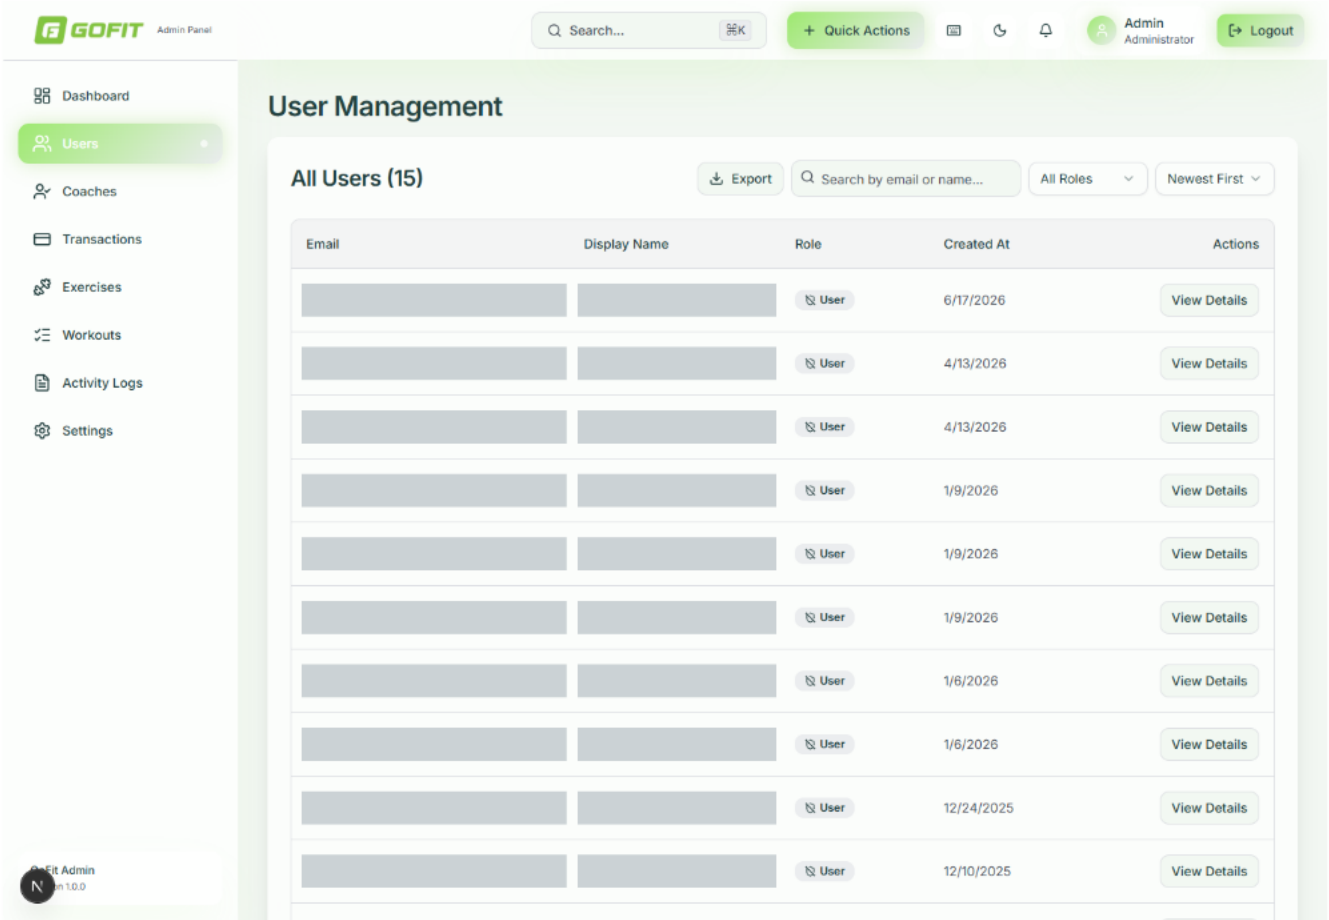

Session calendar

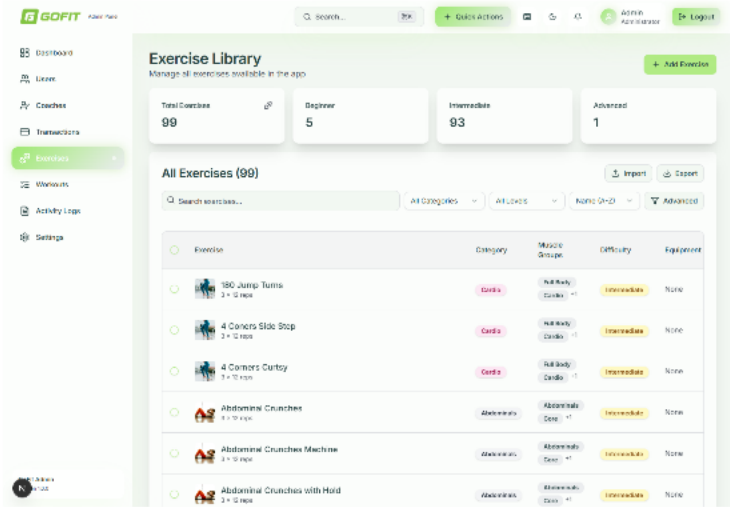

Check-in configuration

Scheduled delivery remains a separate validation task.

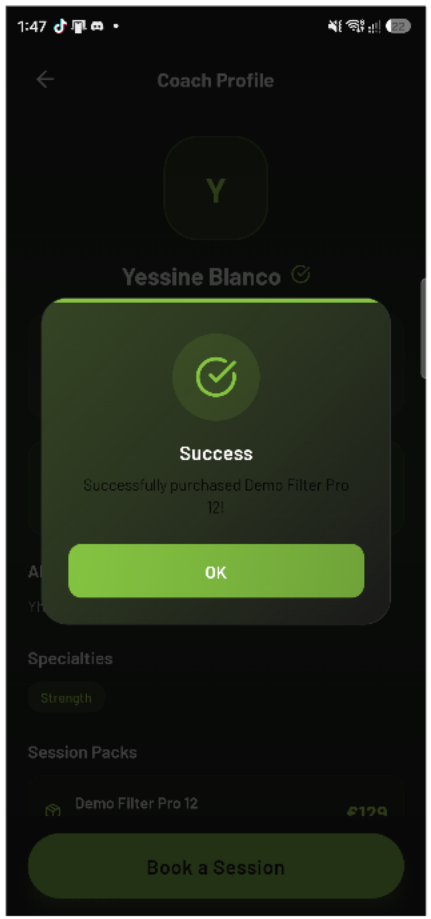

Demonstration — administration

Role-based management and catalog maintenance

Demonstration — payment and saved purchase records

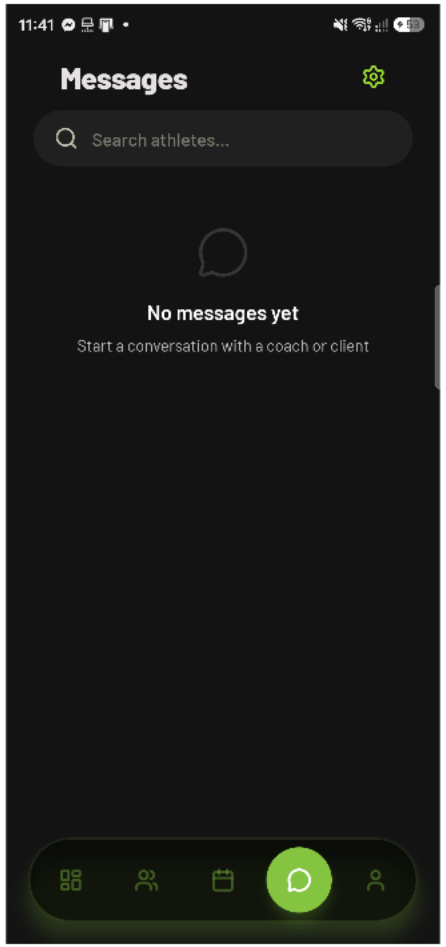

Purchase confirmation

Purchase	Amount	Payment	Sessions	Status
1-on-1 session 10/26/2026, 12:00:00 PM (Berlin)	EUR 60.00	Sandbox · paid pi_3UU4MLGYNkQGJJnZ2OcTanZx	60 min	confirmed
Demo Filter Pro 12	EUR 129.00	Sandbox · paid pi_3UTs8jGYNkQGJJnZ16wenS0v	12/12	active

Saved records visible to administrators

Android pack: €129 / 12 credits. Standalone €60: API and admin evidence; native checkout pending.

Communication features

Coach–client communication

Conversation interface and realtime paths
Video integration with server-issued tokens

Two-party media and reconnection require further testing.

Validation approach

Automated tests for mobile and administration logic

Hands-on checks on one Android development device

Browser and API checks for administration and payments

October 2026 follow-up, after the internship period

Recorded automated test results

146

Mobile tests across 25 suites

34

Administration tests

Administration TypeScript check passed.
Mobile TypeScript check retained 12 pre-existing diagnostics.

Passing unit tests do not establish end-to-end provider or device behavior.

Scoped functional validation

Scenario	Retained observation	Boundary
Pack purchase	Android: €129 paid; 12 credits saved	Sandbox case only
Standalone session	€60 capture and admin record	API evidence; native test pending
Body measurements	Guidance and permission states	Fresh capture and accuracy unverified
Video consultation	Integration and token code	No retained two-party call

Implemented paths, observed results and pending checks are reported separately.

Remaining validation

Device and integration checks

iOS integration and real-device testing
Two-party audio/video calls
Native standalone-session checkout

Reliability and evaluation

Offline reconciliation
Independent measurement accuracy
Scheduled automation delivery
Payment recovery, refunds and payouts

These capabilities remain unfinished or unverified within the retained evidence.

CONCLUSION
& FUTURE WORK

Connected athlete, coach and administrator workflows in one prototype.

Implemented shared account, training, nutrition and coaching records.

Retained scoped device, automated-test and sandbox-payment evidence.

Developed the mobile application and web administration portal.

Conclusion

Prototype delivered; production validation remains.

Future perspectives

Device and media validation

Complete iOS, native checkout and two-party call tests.

AI evaluation

Measure estimation error and assess generated recommendations.

Reliability

Test offline reconciliation and fresh scheduled delivery.

Production release

Establish payment recovery, refunds, payouts and release configuration.
